1 About this document

These operating instructions describe the Rotavapor® R-300 at the time supplied. They are an integral part of the product and contain important information that is necessary for safe operation and maintenance.

These operating instructions apply to all variants of the Rotavapor® R-300 and are intended primarily for laboratory staff.

- ► To ensure safe and trouble-free operation, read these operating instructions before starting up the device and follow the guidance they contain.
- ▶ Keep the operating instructions somewhere near to the device.
- Pass on the operating instructions to any subsequent owner or user.

BÜCHI Labortechnik AG accepts no liability whatsoever for any faults or damage that result from the failure to follow these operating instructions.

If you still have any questions after reading these operating instructions, please contact BÜCHI Labortechnik AG Customer Service. Contact details for your local agents can be found on the back cover of these operating instructions or on the Internet at http://www.buchi.com.

1.1 Warning notices in this document

Warning notices warn you of dangers that can occur when handling the device. There are four danger levels, each identifiable by the signal word used.

| Signal word | Meaning |
|-------------|--|
| DANGER | Indicates a danger with a high level of risk which could result in death or serious injury if not prevented. |
| WARNING | Indicates a danger with a medium level of risk which could result in death or serious injury if not prevented. |
| CAUTION | Indicates a danger with a low level of risk which could result in mi- nor or medium-severity injury if not prevented. |
| NOTICE | Indicates a danger that could result in damage to property. |

1.2 Symbols

The following symbols may be displayed in this instruction manual or on the device:

1.2.1 Warning symbols

| Symbol | Meaning | Symbol | Meaning |
|--------|------------------------------|--------|---------------------------------------|
| | General warning | | Corrosive substance |
| | Dangerous electrical voltage | | Flammable substance |
| | Biological hazard | EX | Potentially explosive atmos- phere |
| | Breakable items | | Dangerous gases |

| Symbol | Meaning | Symbol | Meaning |
|--------|---------------------|--------|---------------------------------------|
| | Hot surface | | Health-harming or irritant substances |
| | Risk of hand injury | | Strong magnetism |
| | | | |

1.2.2 Mandatory directive symbols

| Symbol | Meaning | Symbol | Meaning |
|--------|------------------------|--------|---|
| | Wear safety goggles | | Wear protective clothing |
| | Wear protective gloves | \$-? | Heavy load, do not lift with- out assistance |

1.2.3 Other symbols

NOTE

1

This symbol draws attention to useful and important information.

- ☑ This character draws attention to a requirement that must be met before the instructions below are carried out.
- ▶ This character indicates an instruction that must be carried out by the user.
- ⇒ This character indicates the result of a correctly carried out instruction.

1.3 Available languages

These operating instructions were originally produced in German and have been translated into several other languages. The translations are available on the enclosed CD or can be obtained as a PDF file via http://www.buchi.com.

1.4 Trademarks

Product names and registered or unregistered trademarks that are used in this instruction manual are used only for identification and remain the property of the owner in each case.

For example, Rotavapor® is a registered trademark of BÜCHI Labortechnik AG.

2 Safety

2.1 Intended use

The Rotavapor® R-300 is intended for evaporating and condensing solvents. It can be used in laboratories and production facilities for the following operations:

- Evaporating solvents
- Synthesis and purification of chemicals
- Recycling and concentration of solvents
- Recrystallization
- Drying of powders and granulates

2.2 Use other than that intended

Use of any kind other than that described in Chapter 2.1 "Intended use", page 8 and any application that does not comply with the technical specifications (see Chapter 3.5 "Technical data", page 19) constitutes use other than that intended.

In particular, the following applications are not permissible:

- Use of the device in an environment with a potential risk of explosion or areas which require explosion-safe apparatus
- Use of the device for processing substances in the food, animal feed or cosmetics industries
- Production and processing of substances that can lead to spontaneous reactions, e.g. explosives, metal hydrides or solvents that can form peroxides
- Working with explosive gas mixtures
- Drying hard, brittle substances (e.g. stone or soil samples) that could damage the evaporating flask
- Shock-cooling of the evaporating flask or other glass components

Damage or hazards attributable to use of the product other than as intended are entirely at the risk of the user alone.

2.3 Staff qualification

Unqualified persons are unable to identify risks and are therefore exposed to greater dangers.

The device may only be operated by suitably qualified laboratory staff.

These operating instructions are aimed at the following target groups:

Users

Users are persons that meet the following criteria:

- They have been instructed in the use of the device.
- They have completed the induction training for the Rotavapor®. See Chapter 10.6 "Rotavapor® induction training", page 113.
- They are familiar with the contents of these operating instructions and the applicable safety regulations and apply them.
- They are able on the basis of their training or professional experience to assess the risks associated with the use of the device.

Operator

The operator (generally the laboratory manager) is responsible for the following aspects:

- The device must be correctly installed, commissioned, operated and serviced.
- Only suitably qualified staff who have completed the induction training on the Rotavapor may be assigned the task of performing the operations described in these operating instructions.
- The staff must comply with the locally applicable requirements and regulations for safe and hazard-conscious working practices.
- Safety-related incidents that occur while using the device should be reported to the manufacturer (quality@buchi.com).

BUCHI service technicians

Service technicians authorized by BUCHI have attended special training courses and are authorized by BÜCHI Labortechnik AG to carry out special servicing and repair measures.

2.4 Residual risks

The device has been developed and manufactured using the latest technological advances. Nevertheless, risks to persons, property or the environment can arise if the device is used incorrectly.

Appropriate warnings in this manual serve to alert the user to these residual dangers.

2.4.1 Dangerous vapors

Distillation can produce dangerous vapors that are capable of causing life-threatening toxic effects.

- ▶ Do not inhale any vapors produced during distillation.
- Ensure that vapors are removed by a suitable fume hood.
- Only use the device in well ventilated areas.
- If vapors escape from joints or connections, check the seals concerned and replace them if necessary.
- ► Do not distill any unknown fluids.
- Observe the safety data sheets for all fluids used.

2.4.2 High internal pressure

The evaporation of fluids can produce high pressures inside the flask or the condenser. If that pressure becomes too great, the glass components could explode.

- Make sure that the internal pressure inside the glass components is never greater than atmospheric pressure.
- When distilling without a vacuum, set the vacuum pump to atmospheric pressure so that excess pressure is automatically dissipated.
- ▶ If a vacuum pump is not used, leave the vacuum connection open.

2.4.3 Hot surfaces and liquids

The heating bath, evaporating flask and parts of the condenser can become very hot. If touched they can cause skin burns.

▶ Do not touch hot surfaces or liquids or else wear suitable protective gloves.

2.4.4 Rotating parts

The evaporating flask and the vapor duct are rotated by the rotary drive unit. Hair, clothing or jewelry can become caught up if allowed to come into contact with the rotating parts.

At high speeds, the heating fluid may be sprayed out by the rotation of the evaporating flask.

- Wear work overalls or protective clothing.
- ▶ Do not wear loose or baggy items of clothing such as scarves or neck-ties.
- Tie up long hair.
- ▶ Do not wear jewelry such as necklaces or bracelets.
- At high speeds and/or high temperatures, use the optional safety guard or a similar protective arrangement.

2.4.5 Faults during operation

If a device is damaged, sharp edges, moving parts or exposed electrical wires can cause injuries.

- ▶ Regularly check device for visible damage.
- If faults occur, switch off the device immediately, unplug the power cord and inform the operator.
- Do not continue to use devices that are damaged.

2.4.6 Glass breakage

Broken glass can cause severe cuts.

Damaged glass components may implode if subjected to a vacuum.

Minor damage to the ground joints impairs the sealing effect and may therefore diminish performance.

- ▶ Handle the flask and other glass components carefully and do not drop them.
- Always visually inspect glass components for damage every time they are to be used.
- Do not continue to use glass components that are damaged.
- Always wear protective gloves when disposing of broken glass.

2.5 Personal protective equipment

Depending on the application, hazards due to heat and/or corrosive chemicals may arise.

Always wear appropriate personal protective equipment such as safety goggles, protective clothing and gloves. Make sure that the personal protective equipment meets the requirements of the safety data sheets for all chemicals used.

2.6 Modifications

Unauthorized modifications may impair safety and lead to accidents.

- ▶ Use only genuine BUCHI accessories, spare parts and consumables.
- Technical modifications to the device or accessories should only be carried out with the prior written approval of BÜCHI Labortechnik AG and only by authorized BUCHI technicians.

BUCHI accepts no liability whatsoever for damage arising as a result of unauthorized modifications.

3 Product description

3.1 Description of function

The Rotavapor® R-300 is a rotary evaporator with the aid of which single-stage distillation can be carried out quickly without unduly stressing the product. The basis of the process is the evaporation and condensing of solvents in a rotating evaporating flask under vacuum. Distillation under vacuum is more efficient and gentler on the product.

The product is heated in the evaporating flask by the heating bath. The rotary drive unit evenly rotates the evaporating flask. Rotation increases the surface area of the liquid which leads to an increased evaporation rate. This also constantly mixes the product which prevents localized overheating and delayed evaporation.

The vapor passes from the evaporating flask through the vapor duct into the cooling section (cooling condenser). There, the thermal energy of the vapor is transferred to the coolant fluid so that the vapor re-condenses. The resulting solvent is collected in the receiving flask and can then be reused or properly disposed of.

Distillation under vacuum

Distillation capacity depends on the following factors:

- Temperature of the heating bath
- Pressure in the evaporating flask
- Rotation speed of the evaporating flask
- Size of the evaporating flask

Pressure in the evaporating flask: a low pressure (below atmospheric) reduces the boiling point of the solvent. A lower boiling point means the solvent does not have to be heated as much. Distillation under vacuum is more efficient and gentler on the product.

Vacuum control: a stable vacuum adapted to the application prevents undesirable solvent emissions and bumping (boiling) of the product. Control of the vacuum is carried out by two means: the BUCHI VacuBox measures the current vacuum in the distillation system. The BUCHI VacuBox is connected to the BUCHI Interface I-300 or I-300 Pro. The BUCHI Interface is used to display the current readings and control the components of the distillation system. See also Chapter 5.17 "Assembling the BUCHI distillation system", page 42.

Heating bath temperature, coolant temperature and vapor temperature: to ensure optimum distillation, it is important to make sure that the temperature difference between the coolant and the heating bath is at least 40 °C. The temperature of the rising vapor should be mid-way between the heating bath temperature and the coolant temperature. See also Chapter 6.2.3 "Adjusting distillation conditions", page 60.

3.2 Options

There are two different heating bath sizes for the Rotavapor® R-300:

- The Heating Bath B-301 is suitable for evaporating flasks up to 1 L. See Heating Bath B-301.
- The Heating Bath B-305 is suitable for evaporating flasks up to 5 L. See Heating Bath B-305.

As an additional option, the Rotavapor® R-300 can be operated with the Interface I-300 or I-300 Pro. Connection of the interface unit to the Rotavapor® requires a VacuBox.

The Rotavapor® R-300 is available with either manual or motorized vertical adjustment of the rotary drive unit.

3.3 Configuration

3.3.1 Front view

Fig. 1: Rotavapor R-300 configuration with Heating Bath B-305 and B-301 and Heating Bath B-300 Base

- 1 Condenser
- 2 Glass stopcock
- 3 Solvent backfeed (tubing)
- 4 Flange nut
- 5 Control knob for rotation speed
- 6 Receiving flask
- 7 Handle for height adjustment
- 8 Heating Bath B-305
- 9 On/Off master switch for heating bath

- 10 Heating Bath B-300 Base
- 11 Control knob for heating bath temperature setting
- 12 On/Off master switch for Rotavapor
- 13 Button for angle adjustment
- 14 Locking button for rotary drive unit
- 15 Combi-clip
- 16 Evaporating flask
- 17 Heating Bath B-301

Depending on requirements, either the Heating Bath B-305 (for flasks up to 5 L max.) or the Heating Bath B-301 (for flasks up to 1 L max.) can be used.

3.3.2 Rear view

Fig. 2: Rear view of Rotavapor R-300

- 1 Coolant inlet connection
- 2 Vapor temperature sensor connection 7
- 3 Communication cable connection
- 4 Type plate
- 5 Power supply connection
- 6 Cleaning hole
 - Coolant outlet connection
- 8 Vacuum connection
- 9 Woulff bottle
- 10 Vertically adjustable foot for leveling

- 1 Maximum temperature indication
- 2 Indication of lift depth stop
- 3 Actual temperature indication
- 4 Set temperature indication
- 5 On/Off master switch for heating bath and heating bath base

- 6 Set temperature locked indicator
- 7 Connection symbol device is being controlled via a BUCHI interface
- 8 START/STOP function activated on pressing navigation control
- 9 Control knob for setting required temperature and heater START/STOP function

3.3.4 Type plate

The Rotavapor R-300 and the Heating Bath B-301/B-305 each have their own type plate on the rear. On the rear of the Heating Bath B-300 Base there is a fuse rating plate.

| | | hnik AG - Switzerlan | |
|--|-------------------|-------------------------|------------------|
| | 100 - 24 | 40 VAC - | 2 3 4 |
| Frequ.: Power: Built: Made in | 100 W - 2014 — | | 5 6 7 8 |
| | | | E® |

Fig. 4: Type plate (example)

- 1 Company name and address
- 2 Device name
- 3 Serial number
- 4 Input voltage
- 5 Frequency
- 6 Maximum power rating

- 7 Year of manufacture
- 8 Country of manufacture
- 9 Approvals
- 10 Symbol for "Do not dispose of as household waste"
- 11 Product code

3.3.5 Warning symbols on the device

The heating bath and the bath cover carry the following warning symbol:

This symbol warns of the risk of skin burns from the hot surface of the heating bath.

3.3.6 Cover for Heating Bath B-305 (optional)

To save energy and to minimize water evaporation when not in use, a cover is available for the Heating Bath B-305.

Fig. 5: Heating Bath B-305 with cover

1 Bath cover 2 Heating Bath B-305

3.4 Scope of delivery

NOTE

The scope of delivery depends of the configuration of the purchase order.

Accessories are delivered as per the purchase order, order confirmation, and delivery note.

3.5 Technical data

3.5.1 Rotavapor® R-300

| Specification | Value |
|--|--|
| Dimensions (W x D x H) with glass apparatus V | 607 x 429 x 947 mm |
| Dimension (W x D x H) Shipping box | 700 x 590 x 605 mm |
| Weight | 13.5 kg (electric lift) 13.0 kg (manual lift) |
| Power supply | 100 – 240 VAC ± 10% |
| Power consumption | 100 W |
| Frequency | 50/60 Hz |
| Ingress protection rating | IP21 |
| Overvoltage category | II |
| Pollution degree | 2 |
| Immersion angle | 10 – 50° |
| Vertical adjustment range | 220 mm |
| Limit position detection adjustment range | 170 mm (electric lift) 100 mm (manual lift) |
| Rotation speed range | 10 – 280 rpm |
| Max. flask capacity | 3 kg |
| Approval | CE/CSA |

3.5.2 Heating bath base, B-300

| Specification | Value |
|----------------------------------|--|
| Dimensions (W x D x H) | 183 x 286 x 82 mm |
| Weight | 0.8 kg |
| Power supply | 100 - 120 VAC ± 10% 220 - 240 VAC ± 10% |
| Frequency | 50/60 Hz |
| Power consumption (with bath) | 1500 W |
| Ingress protection rating | IP21 |
| Approval | CE/CSA |

3.5.3 Heating bath

| Specification | Heating Bath B-301 | Heating Bath B-305 |
|---------------------------|---------------------|---------------------|
| Dimensions (W x D x H) | 225 x 212 x 192 mm | 307 x 275 x 202 mm |
| Weight | 2.0 kg | 4.2 kg |
| Power supply | 100 - 120 VAC ± 10% | 100 - 120 VAC ± 10% |
| | 220 - 240 VAC ± 10% | 220 - 240 VAC ± 10% |
| Frequency | 50/60 Hz | 50/60 Hz |
| Power consumption | 1250 W | 1500 W |
| Ingress protection rating | IP21 | IP21 |
| Maximum bath capacity | 2.3 L | 5.5 L |
| Regulation precision | At 60 °C: ± 1 °C | At 60 °C: ± 1 °C |
| | At 95 °C: ± 1 °C | At 95 °C: ± 1 °C |
| | | At 180 °C: ± 3 °C |
| | | At 220 °C: ± 4 °C |
| Heating fluid | Water | Water/Oil |
| Approval | CE/CSA | CE/CSA |

3.5.4 Ambient conditions

| Max. altitude above sea level | 2000 m |
|-------------------------------|--|
| Ambient temperature | 5 - 40 °C |
| Maximum relative humidity | 80 % for temperatures up to 31 °C decreasing linearly to 50 % at 40 °C |

The laboratory apparatus described here may only be used indoors.

3.5.5 Materials

| Component | Material |
|--------------------------------|---------------------------------------|
| Rotavapor casing | Aluminum with powder coating |
| Heating bath casing | PBT, partially glass-fiber reinforced |
| Heating bath | Stainless steel 1.4404, glass-peened |
| Protection shield | PMMA |
| Protection shield handle | PBT |
| Rotary drive unit | Steel 1.4305 |
| Flange connection to condenser | Aluminum, anodized |
| Seal | NBR, PTFE coated |
| Glass components | Borosilicate 3.3 |
| | |

3.6 Safety features

3.6.1 Overheat cut-out

To protect against overheating, the heating bath has a thermostatic bath temperature control.

In addition it is fitted with an electronic and a mechanical overheat cut-out.

The **electronic overheat cut-out** monitors the temperature limit, the heating rate and the function of the temperature sensor. If the electronic overheat cut-out trips, the device should be inspected by a BUCHI service technician.

The **mechanical overheat cut-out** consists of a bi-metallic thermostat that immediately cuts off the power supply if the temperature exceeds a certain level. The mechanical overheat cut-out has to be manually reset once the heating bath has cooled down (see Chapter 8.2.1 "Resetting overheat safety cut-out on heating bath", page 76).

3.6.2 Protection against electrical overload

The Heating Bath B-300 Base is fitted with a safety fuse.

The rotary drive unit has an electrical overload cut-out.

3.6.3 Clips and holders

- Combi-clip for fixing the evaporating flask and safe release of sticking ground-glass joints
- Ball joint clamps for securely fixing the receiving flask
- Laboratory stand and holder for fixing glass apparatus
- Cap nut for fixing the condenser

3.6.4 Glassware

- Inert borosilicate glass 3.3
- GL14 hose barbs for preventing glass breakage
- Optional feature: P+G plastic-coated glass

3.6.5 Optional accessories

- Safety guard to protect user against glass splinters, solvent splashes or hot heating fluid in the event of accidents or implosions
- Laboratory stand for providing additional fixing for condenser

For more information, see Spare parts and accessories.

3.6.6 Earthquake safety

• Lashing eyes for protecting the equipment against falling

For fitting, see Chapter 5.2 "Securing against earthquakes", page 23.

4 Transport and storage

4.1 Transport

NOTICE

Risk of breakage due to incorrect transportation

- Make sure that the device is fully dismantled and all parts of the device are safely packed in such a way as to prevent breakage, ideally in the original box.
- Avoid sharp movements during transit.
- ▶ After transportation, check the device and all glass components for damage.
- Damage that has occurred in transit should be reported to the carrier.
- Keep packing for future transportation.

4.2 Storage

- Make sure that the ambient conditions are complied with (see Chapter 3.5 "Technical data", page 19).
- ▶ Wherever possible, store the device in its original packaging.
- After storage, check the device, all glass components, seals and tubing for damage and replace if necessary.

5 Installation

5.1 Installation site

The installation site must meet the following requirements:

NOTICE

Risk of property damage due to overheating

- Do not run any cables under the heating bath.
- Firm and level surface
- Space requirements: at least 620 mm x 510 mm (W x D)
- Clear access to mains switch and power supply cable.
 (Note: it must be possible to switch off the equipment involved in the distillation process and disconnect the electrical connections at any time.)
- If distilling under vacuum, there must be fume extraction apparatus available. Wherever possible, the Rotavapor® R-300 should be set up inside a fume hood. If that is not possible for reasons of space, it can also be set up outside if the safety guard (optional accessory) is fitted and the residual vapors are fed into the fume hood.

5.2 Securing against earthquakes

The Rotavapor R-300 has an earthquake fixing to protect the device against falling.

Fig. 6: Earthquake fixing

- 1 Lashing eye
- ▶ Lie the Rotavapor R-300 on its back.
- Fix the lashing eye (1) to the base of the R-300 from underneath using a screw. There is a threaded hole provided for the purpose.
- ► Tie the lashing eye to a fixed point using strong cord or a wire.

The Heating Bath B-300 Base can also be secured against earthquakes in similar fashion by fitting a lashing eye on the underneath.

5.3 Fitting the vapor duct, vacuum gasket and cooling condenser

- Insert vapor duct into the rotary drive unit.
 - ⇒ The vapor duct snaps into place with an audible click.
- Pull on the vapor duct to check that it is properly engaged and cannot be pulled out without resistance.

 \square The adapter is in the sealing.

- Place the sealing with the inserted adapter on the vapor duct
- Press the sealing evenly into the flange.
- (1) Adapter
- ② Sealing VS26
- ③ Vapor duct

NOTICE! The adapter is needed for every installation of the sealing.

- ► Remove the adapter.
- ► Keep the adapter for later use.
- Tighten the flange nut to fix the cooling condenser in position. When doing so, make sure that the spring clip in the flange nut completely encircles the neck of the cooling condenser.

5.4 Fitting the glass stopcock

Fig. 7: Cooling condenser with glass stopcock and backfeed tube

1 Glass stopcock

- 3 Glass stopcock handle
- 2 Flat face on glass stopcock
- 4 Solvent backfeed (tubing)

Materials required:

- Glisseal 40 red laboratory grease
- ► Feed the tube on the glass stopcock (1) through the vapor duct and into the evaporating flask.
- ▶ If necessary, connect the backfeed tube for solvent (4).
- Coat the ground joint of the glass stopcock with Glisseal 40 red laboratory grease.
- ▶ Insert glass stopcock into the cooling condenser and turn to the desired position.

The glass stopcock performs various functions depending on its position:

- Glass stopcock handle pointing right/forwards: the system is sealed. This is the standard position for distillation.
- Glass stopcock handle pointing left/rearwards: system is being vented.
- Glass stopcock handle pointing downwards: additional solvent can be fed into the evaporating flask via a connected backfeed tube.

5.5 Fitting PTFE stopcock (optional accessory)

Fig. 8: Cooling condenser with PTFE stopcock and backfeed tube

- 1 Tube on PTFE stopcock
- 3 Three-way tap
- 2 Handle on three-way tap
- 4 Solvent backfeed (tubing)

NOTE

The PTFE stopcock does not have to be greased.

- Insert the tube (1) into the end of the PTFE stopcock and through the vapor duct into the evaporating flask.
- Carefully insert the PTFE stopcock into the cooling condenser. When doing so, hold the PTFE stopcock so that the three-way tap (3) is still facing forwards.
 NOTICE! Take care not to damage the sealing lips on the PTFE stopcock.
- ▶ Rotate the PTFE stopcock 90° so that the three-way tap points upwards.
- Connect the backfeed tube (4) to the PTFE stopcock.
- ▶ Turn the handle on the three-way tap (2) to the desired position.

The PTFE stopcock performs various functions depending on its position:

- Three-way tap handle pointing forwards: additional solvent can be fed into the evaporating flask via a connected backfeed tube.
- Three-way tap handle pointing left: the system is sealed.
- Three-way tap handle pointing backwards: system is being vented.

5.6 Fitting the Interface I-300/I-300 Pro (optional accessory)

The I-300/I-300 Pro is designed for indicating, adjusting and controlling the complete distillation system. The Interface I-300 settings enable precise specification of the individual process parameters.

The interface unit can be mounted on the vertical adjustment handle.

Tools required:

Torx keys Tx20 and Tx30

Fig. 9: Handle of Rotavapor R-300

Communciation cable

1

2

Cover

- 3 Fixing screw for cover
- Undo the fixing screw (3) on the underneath of the handle and remove the cover (1) from the top.
- Pull the communication cable (2) out of the hole in the arm of the Rotavapor R-300.
- Position the holder (2) for the interface unit on the Rotavapor arm (6). At the same time, feed the communication cable through the bottom hole in the holder.
- ► Fix the holder to the Rotavapor arm with the screw (4) supplied. When doing so, pass the screw through the hole in the metal plate (5).
- Connect the communication cable to the COM port on the rear of the interface unit.
- Position the interface unit (3) on the holder. When doing so, make sure the lugs on the back of the interface unit engage in the holder.
- ► Fix the interface unit on the holder from behind using the knurled-head screw (1) supplied. When doing so, make sure that the communication cable is not trapped.

5.7 Mounting VacuBox on R-300 (optional accessory)

The VacuBox is required if the R-300 is to be operated with the Interface I-300 or I-300 Pro.

Fig. 10: Mounting the VacuBox on the Rotavapor

- 1 Fixing screw for cover and VacuBox 3 VacuBox
- 2 Cover

Tools required:

- Torx key Tx20
- ▶ Unscrew the two fixing screws (1) from the cover (2) and remove the cover.
- ► Fit the VacuBox (3) in place of the cover using the two cover fixing screws (1) previously removed.

5.8 Mounting LegacyBox on R-300 (optional accessory)

If legacy peripherals are to be used with the Interface I-300/I-300 Pro, a LegacyBox has to be fitted in addition to the VacuBox.

Fig. 11: Mounting LegacyBox and VacuBox on the Rotavapor

- 1 Fixing screws for cover
- 2 Cover

- 3 LegacyBox
- 4 Fixing screws for VacuBox
- 5 VacuBox

Tools required:

- Torx key Tx20
- ▶ Unscrew the fixing screws (1) from the cover (2) and remove the cover.
- Fit the LegacyBox (3) and VacuBox (5) together in place of the cover. To do so, use the fixing screws (4) supplied.

5.9 Fitting the Woulff bottle (optional accessory)

The Woulff bottle is used to separate out particles and droplets and to equalize pressure.

The Woulff bottle can be mounted either on the inlet (vacuum) of the Vacuum Pump V-300 (see vacuum pump manual) or on the Rotavapor® R-300.

Fig. 12: Mounting the Woulff bottle on the Rotavapor

- 1 Top part of Woulff bottle 3
- 2 Glass part of Woulff bottle

Precondition:

- ☑ The holder (3) for the Woulff bottle has already been fitted on the Rotavapor R-300.
- ▶ Unscrew the lower, glass part (2) of Woulff bottle.
- ▶ Press the top part of the Woulff bottle (1) into the holder so that it snaps into place.

Holder

Screw the lower, glass part of the Woulff bottle into the top part again.

5.10 Fitting AutoDest sensor and vapor temperature sensor (optional accessory)

When using an Interface I-300/I-300 Pro there is the option of performing automatic distillation. Automatic distillation requires connection of an AutoDest sensor to the Rotavapor R-300. The AutoDest sensor is connected to the inlet and outlet of the cooling condenser and continuously measures the following temperatures:

- · Temperature of the incoming coolant
- Temperature of the outgoing coolant
- Temperature of the vapor exiting the evaporating flask

NOTE

The AutoDest sensor has to be calibrated when first used and also when connected to a new VacuBox (see Operating Instructions I-300/I-300 Pro, Section 8.5 "Calibrating AutoDest sensor").

Fig. 13: AutoDest sensor, vapor temperature sensor and cooling condenser with evaporating flask of a Rotavapor R-300

- 1 Vapor temperature sensor
- 2 AutoDest sensor

- Cooling condenser
- 5 Coolant inlet on condenser
- Communication connection between AutoDest 6
- 4
- sensor and VacuBox
- Coolant outlet on condenser
- 3

NOTE

There are two arrows stamped on the AutoDest sensor indicating the direction of flow for the coolant. The hoses for the coolant must be connected according to the direction of flow as the AutoDest sensor measures the difference between the incoming and outgoing coolant temperature and communicates the readings to the VacuBox and interface unit for the purposes of automatic control.

 Connect two tubes between the AutoDest sensor (2) and the cooling condenser (4). When doing so pay attention to the direction of flow of the coolant. The arrows on the AutoDest sensor indicate the direction of flow.

NOTE

The distance between the AutoDest sensor and the cooling condenser should not be more than 10 cm so as not to falsify the readings for the incoming and outgoing coolant temperatures in the distillation system.

- Connect a tube between the coolant inlet (5) on the AutoDest sensor and the outlet of the recirculating chiller.
- Connect a tube between the coolant outlet (6) on the AutoDest sensor and either the inlet of the recirculating chiller or another cooling condenser.
- ▶ Insert a vapor temperature sensor (1) in the Rotavapor R-300 and fix it in place.
- Connect the outgoing cable from the AutoDest sensor to the VacuBox. Use the connection marked "VT/AS" for this lead.

NOTE

There should be no air bubbles in the coolant as otherwise correct functioning of the AutoDest sensor is not guaranteed.

5.11 Fitting a foam sensor (optional accessory)

The foam sensor measures foam formation in the evaporating flask and emits a signal if the foam reaches the foam sensor. The foam is reduced by a short ventilation burst.

Fig. 14: Foam sensor in the evaporation unit of a Rotavapor R-300

- 1 Foam sensor
- 2 Holder for foam sensor
- 3 Securing nut

- 5 Cooling condenser
- 6 Evaporating flask

Clamp screw

7 Foam sensor centrally positioned

NOTICE

Risk of damage to foam sensor from contact with glass components

When inserting the foam sensor, make sure that the sensor rod passes centrally through the components without touching.

4

Use a vapor duct with a standard ground glass joint that is as large as possible (e.g. SJ 29/32).

Precondition:

☑ The distillation system includes an Interface I-300/I-300 Pro and a VacuBox.

- ▶ Remove glass stopcock.
- ▶ Fit the tapered holder (2) over the upper end of the foam sensor (1).
- Slide the clamp nut (3) onto the opening for the glass stopcock.
- ▶ Feed the foam sensor into the opening for the glass stopcock and through the vapor duct into the evaporating flask (6) of the Rotavapor R-300 and fix in place with the clamp nut (3). The tip of the foam sensor should be positioned approx. 4 to 5 cm below the ground neck of the evaporating flask.
- ▶ Align foam sensor centrally and fix in place with the clamp screw (4).
- Connect the communication cable from the foam sensor to the VacuBox. Plug the connector into the socket marked "FS".

5.12 Connecting vacuum and coolant tubing

Fig. 15: Vacuum and coolant tubing connections on the cooling condenser of the R-300

- 1 Cooling condenser inlet
- 3 Cooling condenser outlet
- 2 Connection for vapor temperature 4 Vacuum connection sensor
- Connect coolant tubes to the two coolant connections (1) and (3) using GL14 cap nuts.
- ► Connect the vacuum tubing to the vacuum connection (4) using a GL14 cap nut.
- Option 1: connect the vapor temperature sensor to connection (2) using a GL14 cap nut.
- Option 2: connect the vapor temperature sensor of the AutoDest sensor to connection (2) using a GL14 cap nut. See Chapter 5.10 "Fitting AutoDest sensor and vapor temperature sensor (optional accessory)", page 31.

5.12.1 Overview: vacuum and coolant tubing

The following illustration provides an overall view of all vacuum and coolant tubing connections in the complete distillation system:

Fig. 16: Overview of tubing connections on Rotavapor R-300, Recirculating Chiller F-3xx, Vacuum Pump V-300 and VacuBox

- 1 Connection for vapor temperature sensor
- 2 AutoDest sensor
- 3 Outlet for VacuBox connection
- 4 Woulff bottle outlet

- 5 Coolant inlet on condenser
- 6 Coolant outlet on condenser
- 7 Vacuum connection on Rotavapor
- 8 Vacuum connection on VacuBox
- 9 Connection for AutoDest sensor

5.13 Setting up the heating bath

There are two different heating bath sizes for the Rotavapor R-300:

- Heating Bath B-301 for flasks up to 1 L capacity, only suitable for the use of water as heating fluid
- Heating Bath B-305 for flasks up to 5 L capacity, suitable for the use of water and oil as heating medium

Whichever size of heating bath is used, it is placed on the Heating Bath B-300 Base. Depending on which size of heating bath is used, the heating bath base has to be pushed in a different amount on the Rotavapor rail. With the smaller heating bath, the B-301, the base is pushed in as far as it will go. With the larger heating bath, the B-305, the heating bath base must not be pushed all the way in as otherwise the Rotavapor lift will not be able to lower. A mechanical catch on the Heating Bath B-305 makes sure that the heating bath base is not pushed in too far.

Fig. 17: Heating Bath B-305 and Heating Bath B-300 Base

Heating Bath B-3052Heating Bath B-300 Base

1

Risk of burns if Heating Bath B-301 is used incorrectly

▶ Do not use oil as heating fluid in the Heating Bath B-301.

NOTICE

Risk of heating bath corrosion due to use of unsuitable heating fluid

If pure distilled or de-ionised water is used, add approx. 1 g of Borax (Na₂B₄O₇ x 10 H₂O) per liter of water.

The recommended fluid for use in the heating bath is water. Normal tap water may be mixed with distilled water with a mixing ratio of up to 1:1 according to the water hardness.

- ▶ Slide the Heating Bath B-300 Base (2) onto the base of the Rotavapor R-300.
- Make sure that there are no objects in the Rotavapor base recess as this is where the data is transferred from the heating bath base to the Rotavapor by infra-red signals.
- Place the heating bath (1) centrally on the base.
- Fill the heating bath with suitable fluid.

5.14 Fitting the protection shield (optional)

The protection shield protects against solvent splashes, hot heating fluid splashes and glass splinters in the event of implosions.

NOTE

1

The protection shield only protects against splashes to the front. Protection against splashes in other directions must be provided by the user.

Fig. 18: Fitting the protection shield on the Rotavapor

1 Screw holes

- 2 Button on handle
- Insert the studs on the protection shield mounting bracket into the screw holes (1) on the Rotavapor drive unit.

- Secure the protection shield by inserting the pin supplied in the hole for the mounting bracket.
- Adjust the position of the protection shield to the desired angle by pressing the button on the handle (2).

5.15 Fit the splash guard (optional accessory)

When closed, the splash guard protects against splashes of heating fluid.

NOTE

Use the splash guard with the heating bath B-305.

NOTE

Only suitable for heating bath temperatures up to 160°C.

NOTE

All tools and screws are included in the splash guard specifications supplied.

- Switch the Rotavapor **On/Off** master switch to Off.
- Switch the heating bath **On/Off** master switch to Off.

Fig. 19: Removing the screws on the rear panel

▶ Remove the screws on the rear panel of the Rotavapor.

Fig. 20: Fitting the splash guard on the Rotavapor

- 1 Vertical fixing screw
 - Fixing screw

3

- 2 Horizontal fixing screw
- 4 Fixing screw
- ▶ Place the splash guard on the Rotavapor.
- ► Fix the splash guard using the screws supplied.
- ► Loosen the horizontal fixing screw.
- ► Loosen the vertical fixing screw.

Fig. 21: Aligning the splash guard

- Line up the splash guard and bath with one another.
- Make sure that the distance X is equal on both sides.
- Make sure that the lid can be opened.
- ► Tighten the horizontal fixing screw.
- ► Tighten the vertical fixing screw.

5.16 Connecting the Rotavapor to the power supply

The Rotavapor and the heating bath each have their own separate power supply connection.

Rotavapor

Fig. 22: Power supply connection on Rotavapor R-300

1 Power supply connection

NOTE

i

When connecting the Rotavapor and the heating bath to the power supply, it is important to ensure that they are grounded. The use of 3-core power cables and 3-pin plugs will ensure that is the case.

- Make sure that the available power supply matches the rating indicated on the type plate.
- Plug the power cord into the socket (1) on the Rotavapor and then into a mains power socket.
- If an extension lead is required, make sure that it is grounded and has a suitable power rating.

Heating bath base

Fig. 23: Power supply connection on heating bath base

- Fuse rating plate 2 Power supply connection
- Operation Manual Rotavapor® R-300

1

Plug a separate power cord into the socket (2) on the heating bath base and then into a mains power socket.

5.17 Assembling the BUCHI distillation system

In order to use the Rotavapor® R-300 to best effect, we recommend that it is used together with the following equipment:

The F-3xx is a recirculating chiller with a sealed circulation system. It is available in various capacity ratings.

The Interface I-300/I-300 Pro together with the VacuBox can be used to control and monitor the vacuum. It can control the Rotavapor, the Vacuum Pump V-300 and the Recirculating Chiller F-3xx and maintain a set constant pressure.

The Vacuum Pump V-300 is a diaphragm pump designed for evacuating laboratory apparatus. It can be operated either as a standalone device or combined with optional accessories such as an interface unit and a secondary cold trap to form a complete vacuum system. The laboratory equipment to be evacuated is connected to the vacuum pump and the VacuBox by means of vacuum tubing. See Overview: setting up vacuum tubing connections

Data communication between the laboratory equipment takes place via the communication ports. See Chapter 5.17.2 "Connecting communication cables to the Rotava-por", page 44.

The coolant circulates around the distillation system through a separate circulation system. See Overview: setting up coolant tubing connections.

5.17.1 Overview: setting up communication connections

The laboratory apparatus can be connected in any order. **Important:** as well as the Interface I-300/I-300 Pro, a VacuBox also has to be connected.

Below is an example of the connections between the laboratory apparatus.

Fig. 24: Schematic diagram of communication connections between the BUCHI laboratory equipment (example)

- Connect the Recirculating Chiller F-3xx to the Rotavapor R-300.
- ► Connect the Rotavapor R-300 to the VacuBox.
- ► Connect the VacuBox to the Vacuum Pump V-300/V-600.
- Connect Rotavapor to the Interface I-300/I-300 Pro.

Connections on R-220 Pro:

Information on the connection of communication cables, coolant and vacuum tubing with the Rotavapor R-220 Pro can be found in the operating instructions for the Rotavapor R-220 Pro.

5.17.2 Connecting communication cables to the Rotavapor

The connections between the BUCHI laboratory apparatus are established by means of a standard BUCHI communication cable (COM) in each case.

Fig. 25: Communication cable connections on Rotavapor

- 1 Sensor connection, not used 2 Standard BUCHI communication ports (COM)
- Plug the communication cable for connection to other BUCHI laboratory equipment into one of the standard BUCHI communication ports (2).
- Plug the communication cable into the green communication port on the other item of laboratory equipment.

5.17.3 Overview: setting up coolant tubing connections

The tubing connections between the various items of BUCHI laboratory equipment form a sealed circulation system. The starting and finishing point is always the recirculating chiller (F-3xx).

Below is an example of the tubing connections between the laboratory apparatus.

Fig. 26: Coolant tubing connections in a BUCHI distillation system (example)

| 1 | Inlet on Recirculating Chiller F-3xx | 4 | Condenser outlet on Rotavapor R-300 |
|---|---------------------------------------|---|---|
| 2 | Outlet on Recirculating Chiller F-3xx | 5 | secondary cold trap inlet on Vacuum Pump V-300 |

- 3 Condenser inlet on Rotavapor R-300 6
- Secondary cold trap outlet on Vacuum Pump V-300
- Connect a tube between the outlet of the recirculating chiller (2) and the inlet of the condenser on the Rotavapor R-300 (3).
- Connect a tube between the outlet of the condenser on the Rotavapor R-300 (4) and the inlet of the secondary cold trap on the Vacuum Pump V-300 (5).
- Connect a tube between the outlet of the secondary cold trap on the Vacuum Pump V-300 (6) and the inlet of the recirculating chiller (1).

NOTE

Use GL14 hose barbs for the tubing connections.

Secure tubes with spring clips where necessary.

NOTE

The R-300 is also suitable for use with water coolant.

5.17.4 Overview: setting up vacuum tubing connections

The vacuum tubing connections in a typical BUCHI distillation system lead from the Rotavapor R-300 via a Woulff bottle to the Vacuum Pump V-300. The vacuum is measured by means of the VacuBox, which is also connected to the Woulff bottle.

Fig. 27: Coolant tubing connections in a BUCHI distillation system

- 1 Secondary cold trap outlet
- 2 Vacuum pump outlet
- 3 Vacuum pump inlet
- 4 Woulff bottle outlet (PUMP)
- 5 Woulff bottle inlet (CONTR)
- 6 VacuBox valve connection
- Connect a tube between the Rotavapor R-300 and the top inlet of the Woulff bottle.
- Connect a tube between the outlet of the Woulff bottle marked PUMP (4) and the pump inlet (3).
- Connect the secondary cold trap to the pump outlet (2).
- ► For measuring and controlling the vacuum, connect a tube between the inlet of the Woulff bottle marked CONTR (5) and the VacuBox (6).

The pressure is measured in the VacuBox. The current working pressure can be indicated and controlled by means of the Interface I-300/I-300 Pro.

NOTE

The VacuBox and Woulff bottle can be mounted either on the Rotavapor R-300 or the Vacuum Pump V-300. What is important is that the VacuBox and Woulff bottle are as close as possible to each other (on the same device) as otherwise there is a vacuum control lag.

5.18 Basic settings

Fig. 28: Heating bath basic settings

- 1 Maximum temperature
- 2 Actual temperature
- 3 Set temperature

- 4 Set temperature locked
- 5 START/STOP function activated on pressing navigation control
- 6 Control knob for setting the required temperature and starting/stopping the heating process

Setting the maximum temperature

NOTE

1

Maximum possible temperature settings (1) are defined for the heating bath: The Heating Bath B-305 can be set to a maximum temperature of 95 °C, 180 °C or 220 °C, depending on which fluid is in the bath. The Heating Bath B-301 can be set to a maximum temperature of 95 °C. For safety reasons, the lowest possible maximum temperature should be chosen.

- ▶ To set the maximum temperature, press and hold the control knob (6).
 - \Rightarrow The Settings menu appears, identifiable by the gear symbol on the display.
- Turn the control knob to select the desired maximum temperature, and press it briefly to confirm the selection.

Locking the set temperature

The heating bath has a locking function that prevents the set temperature being inadvertently altered.

- ► To lock the set temperature, press and hold the control knob (6) until the padlock symbol (4) appears on the display.
- Press the control knob again to confirm.
 - \Rightarrow The Settings menu appears, identifiable by the gear symbol on the display.
- To cancel the lock function, press and hold the control knob again until the

padlock symbol disappears.

5.19 Quick check

- ► To complete the installation process, switch on the device at the master switch and check the following points:
- Switch on the rotary drive unit, change the rotation speed and check that the evaporating flask rotates at a different speed.

- CAUTION! Risk of skin burns! Make sure that the heating bath is filled, switch on the heating bath and check that the heating fluid heats up. See Chapter 6.1.1 "Preparing the heating bath", page 49.
- Check that the height of the rotary drive unit can be adjusted. See Chapter 6.1.5 "Raising and lowering rotary drive unit", page 53.
- Check system for leaks, see Chapter 7.2 "Checking the system for leaks", page 66.

6 Operation

6.1 Preparations

6.1.1 Preparing the heating bath

A CAUTION

Risk of skin burns from hot fluids and surfaces

- ▶ Do not put your hands in the hot fluid.
- Do not carry, shift, tip or otherwise move the heating bath when it is filled with hot fluid.
- Do not fill the heating bath right to the very top. Allow for the expansion of the fluid when heated.
- Do not switch on the heating bath when it is empty.

Risk of skin burns from oil splashes

- ▶ Never pour water into hot oil.
- Make sure that the oil used is suitable for these purposes and the desired temperatures. (The oil used must have a flashpoint of > 175 °C.)

Fig. 29: Heating bath display

- 1 Maximum temperature
- 2 "Lift set" indicates that a lower limit has been set for the Rotavapor lift.
- 3 Actual temperature
- 4 Set temperature
- 5 ON/OFF master switch

- 6 Set temperature locked
- 7 Connection symbol heating bath is being controlled by an Interface I-300/ I-300 Pro
- 8 START/STOP function activated on pressing navigation control
- 9 Control knob for setting the required temperature and starting/stopping the heating process

- Switch on the device at the master switch (5).
 - \Rightarrow The heating bath temperature (4) last set is displayed.
- Set the maximum temperature (1), see Chapter 5.18 "Basic settings", page 47.
- Set the desired temperature using the control knob (9).
 - ⇒ The current actual temperature (3) and the specified temperature (4) are shown on the display.
- ▶ Lock the set temperature, see Chapter 5.18 "Basic settings", page 47.

6.1.2 Fitting the evaporating flask

NOTICE

Risk of evaporating flask damage if fitted incorrectly

- When fitting the evaporating flask make sure that the edge of the glass does not strike the vapor duct.
- ► Tighten combi-clip no more than hand-tight.

Fig. 30: Fitting the evaporating flask

1 Combi-clip

3 Evaporating flask

- 2 Vapor duct
- Carefully fit evaporating flask (3) onto the vapor duct (2).
- Screw combi-clip (1) clockwise until hand-tight.

6.1.3 Adjusting immersion angle of evaporating flask

The immersion angle of the evaporating flask has to be adjusted according to the size and capacity of the heating bath (B-301 or B-305) and the evaporating flask.

Fig. 31: Adjusting the immersion angle

1 Cooling condenser

2 Adjuster button for immersion angle

Precondition:

☑ Rotavapor is not in operation.

- ► Hold the cooling condenser (1) firmly with one hand and press and hold the adjuster button (2) with the other hand.
- Adjust the immersion angle.

NOTE

1

When the Rotavapor lift is in its lowered position, there must be at least 10 mm clearance between the edge of the heating bath and the evaporating flask.

- ▶ Release the adjuster button to lock the rotary drive unit in position again.
- Check the vertical travel limit for the lift and, if necessary, readjust the immersion angle or the end stop, see Chapter 6.1.5 "Raising and lowering rotary drive unit", page 53.

6.1.4 Fitting the receiving flask

Fig. 32: Fitting the receiving flask

- 1 Ball joint clamp
- 2 Receiving flask
- Fit the receiving flask (2) onto the condenser from below, hold it firmly in place and secure it with the ball joint clamp (1).
- If the connection is not sufficiently airtight, apply a thin coat of Glisseal 40 red laboratory grease to the ground glass joint.

6.1.5 Raising and lowering rotary drive unit

The rotary drive unit together with the glass components can be raised or lowered either manually or by motor power, depending on the version of the R-300. To prevent the evaporating flask fouling on the heating bath, a minimum depth stop can be set.

Risk of scalding if heating bath overflows

- When immersing the evaporating flask, make sure that the fluid does not overflow due to the displacement.
- ▶ When the evaporating flask is rotating look out for splashing fluid.

Risk of burns from splashing heating fluid

- ▶ When the evaporating flask is rotating look out for splashing fluid.
- ▶ Use the protection shield and wear protective clothing.

Risk of injury when adjusting apparatus height

- Make sure that your fingers are not trapped when adjusting the apparatus height, especially when using the safety guard.
- Make sure that all tubing is long enough and is not under strain after making the adjustment.

NOTICE

Risk of evaporating flask damage due to collision with edge of heating bath

Make sure that there is at least 10 mm clearance between the evaporating flask and the edge and/or bottom of the heating bath.

Fig. 33: Clearance between evaporating flask and edge of heating bath

Electrical height adjustment

Fig. 34: Rotavapor arm

- 1 Set button for adjusting the depth 2 Handle on Rotavapor arm stop
- ► To raise or lower the rotary drive unit, tip the handle (2) up or down to obtain the desired position.
- ► To set a depth stop, move to the drive unit to the desired height and press and hold the Set button (1) for approx. 2 seconds.

Fig. 35: Heating bath display

- 3 "Lift set" indication for depth stop
 - \Rightarrow The display of the heating bath base shows "Lift set" (3).
- To delete a depth stop, press and hold the Set button (1) for at least three seconds until "Lift set" disappears from the display.

The position of the rotary drive unit is indicated on the display of the Heating Bath B-300 Base and the Interface I-300/I-300 Pro as follows:

- If no depth stop has been set, the distance of the lift from the top end is indicated, starting from 0 mm as the highest position. Any position below that is indicated accordingly by a negative figure.
- If a depth stop has been set, the distance of the lift from the bottom end is indicated, starting from 0 mm as the lowest position. Any position above that is indicated accordingly by a positive figure.

NOTE

2 different speeds: the lift moves down quickly until it is 2 cm from the depth stop; it then moves slowly over the last 2 cm to the depth stop.

Manual height adjustment

Fig. 36: Rear view of Rotavapor

1 Handle on Rotavapor arm 2 Stop screw

- ► To raise or lower the rotary drive unit, tip the handle (1) up or down and move the rotary drive unit to the desired position.
- To set a depth stop, press the Set button.
- ⇒ The stop screw (2) drops down onto the base of the Rotavapor. That is the mechanical depth stop.

Performing distillation

6.2

Risk of poisoning from inhalation of hazardous vapors

- ▶ Do not inhale any vapors produced during distillation.
- Ensure that vapors are removed immediately by a suitable fume hood.
- Only use the device in well ventilated areas.
- If vapors escape from joints or connections, check the seals concerned and replace them if necessary.
- ▶ Do not distil any unknown fluids.
- Observe the safety data sheets for all fluids used.

Explosion risk from distillation of hazardous materials

- ▶ Do not distil solvents that produce explosive mixtures of gases.
- Make sure that there is always a sluggishly reactive atmosphere inside the system.
- ▶ Discharge any electrostatic charge by suitable grounding arrangements.
- ► Keep sources of ignition away from the apparatus.
- Use the protection shield and fume extractor, and wear protective clothing.

Risk of explosion from excessive internal pressure

The evaporating flask and/or the condenser could explode if the internal pressure produced by evaporation becomes too great.

Make sure that the pressure in the system is never greater than atmospheric pressure.

Risk of skin burns from hot components

Do not touch hot components unless wearing suitable protective gloves.

Risk of injury from solvent splashes and hot heating fluid splashes

- ► Use the protection shield.
- Make sure that protection against splashes in all directions is provided.
- When the evaporating flask is rotating look out for splashing fluid.

6.2.1 Operating the Rotavapor without control system (interface)

Fig. 37: Components for manual control of Rotavapor R-300

1 Control knob on rotary drive unit 2 Control knob on heating bath

NOTE

When controlling the Rotavapor R-300 manually, it is important to adjust and switch on the laboratory equipment involved in the correct order.

To achieve optimum distillation results, the following procedure is recommended:

- Prepare the heating bath, see Chapter 6.1.1 "Preparing the heating bath", page 49, and start the heating process by briefly pressing the control knob on the heating bath (2).
- Switch on the cooling system. Set the coolant temperature (max. 20 °C) or the flow rate (at least 40 L/h).
- Switch on the Rotavapor at the master switch.
- Fit the filled evaporating flask and the receiving flask.
- Close the glass stopcock.
- Press the control knob on the rotary drive unit (1) and start rotation at a slow speed. The rotation speed can be adjusted by means of the control knob.
- Switch on the vacuum pump and, if necessary, set the required pressure. The boiling point of the solvent must be 20 °C below the temperature of the heating bath.

- Lower the rotating evaporating flask into the heating bath. CAUTION! Risk of pinching injuries! If using the protection shield, make sure that your fingers or other parts of the body are not trapped.
- ▶ Immerse the evaporating flask in the heating bath.
- ▶ Increase rotation to the desired speed.
- ▶ Wait 1 2 minutes to make sure distillation starts.
- If necessary, adjust the vacuum and/or the heater temperature see Chapter 6.2.4 "Optimization distillation", page 60.

6.2.2 Operating Rotavapor with Interface I-300/I-300 Pro

The Rotavapor and the entire distillation system can be fully controlled by an Interface I-300/I-300 Pro. The Interface I-300/I-300 Pro settings enable precise specification of the individual process parameters. For example:

- Rotation speed of the evaporating flask
- Specified temperature of the heating bath
- Specified temperature of the coolant
- Vacuum level
- Duration of the distillation process

Fig. 38: Front view of Interface I-300 showing controls

1 Display

3 STOP button (emergency stop)

2 Function buttons

- 4 Navigation control
- Connect the Interface I-300/I-300 Pro and the VacuBox, see Chapter 5.17.1 "Overview: setting up communication connections", page 43 and the relevant chapters in the operating instructions of the I-300/I-300 Pro.

NOTE

To save energy, the Interface I-300/I-300 Pro offers an "eco mode" option which can be activated if the distillation system is inactive. In eco mode, the distillation system shuts down the activity of the heating bath after a defined delay period. The heating bath does not reheat until the heating bath temperature has dropped to a defined minimum temperature. For details, refer to the operating instructions of the Interface I-300/I-300 Pro.

6.2.3 Adjusting distillation conditions

To obtain optimum distillation conditions, the energy absorbed by the solvent from the heating bath must be removed again in the condenser. To achieve that, the following settings are recommended:

Fig. 39: Distillation conditions

- 1 Coolant temperature: 20 °C
- 2 Vapor temperature: 40 °C
- 3 Heating bath temperature: 60 °C

The temperature difference between heating bath and evaporating flask and between evaporating flask and cooling condenser should be 20 °C in each case.

The pressure in the evaporating flask should be set so that the boiling point of the solvent is around 40 °C. See Chapter 10.1 "Solvent table", page 79.

The flow rate of the coolant depends on the type of coolant used and the pump capacity of the cooler but should be at least 40 to 50 L/h.

Those settings offer the following advantages:

- The evaporating flask can be replaced without the risk of skin burns.
- The evaporation rate of the water in the heating bath is low.
- The energy of the heating bath is efficiently utilized.

6.2.4 Optimization distillation

Depending on the solvent involved, it may also be possible to further optimize the distillation process. The distillation should always be set up so that the condensate does not cover more than three quarters of the coil in the cooling condenser. There should be no condensate visible in the top quarter.

Fig. 40: Cooling condenser

1 Cleaning hole

Risk of explosion from excessive internal pressure

The evaporating flask and/or the condenser could explode if the internal pressure produced by evaporation becomes too great.

Make sure that the pressure in the system is never greater than atmospheric pressure.

NOTE

The stopcock should only be inserted in the cooling condenser, not secured. If an abrupt rise in pressure occurs during distillation, the stopcock will then be able to pop out, which is intended. That guarantees that the system pressure is never greater than atmospheric pressure.

NOTE

If a distillation process is to be carried out at normal pressure, the glass components – for example the cleaning hole (1) on the cooling condenser – should be opened to prevent pressure build-up.

If the condensation is below 3/4 of the condenser:

- ► Increase the vacuum.
 - ⇒ That will lower the boiling point and more vapor will enter the condenser.
- In applications where no vacuum is applied, raise the temperature of the heating bath if necessary.
 - ⇒ That will cause more solvent to evaporate.

If the condensation is above 3/4 of the condenser:

- Decrease the vacuum.
 - ⇒ That will raise the boiling point and less vapor will enter the condenser.
- In applications where no vacuum is applied, lower the temperature of the heating bath.
 - ⇒ That will cause less solvent to evaporate.

6.2.5 Adding solvent during distillation

Precondition:

- ☑ A vacuum pump is connected and running.
- \square A backfeed tube leading from the glass stopcock to the evaporating flask is fitted.

Fig. 41: Cooling condenser with glass stopcock and backfeed tube

1 Glass stopcock

2 Backfeed tube

- Connect a backfeed tube (2) for the solvent to the glass stopcock (1) and hold it in the solvent.
- Turn the glass stopcock until the handle is pointing downwards.
 - \Rightarrow Solvent is drawn into the evaporating flask by the vacuum.
- Make sure that there is not more than 3 kg of solvent in the evaporating flask and that the evaporating flask is not overfilled.
- ▶ Make sure that there is sufficient space for the condensate in the receiving flask.
- Close the glass stopcock.

6.3 Finishing distillation

- Slow down the rotation speed or reduce it to a minimum.
- Raise the rotary drive unit (see Chapter 6.1.5 "Raising and lowering rotary drive unit", page 53). CAUTION! Risk of burns from hot heating fluid splashes.
 When the evaporating flask is rotating look out for splashing fluid.
- ► Vent the Rotavapor.
- ▶ Turn off the rotary drive unit (set the rotation speed to 0 rpm).
- Switch off the heating bath.
- CAUTION! Risk of skin burns from hot evaporating flask. Check the temperature of the evaporating flask and, if necessary, allow it to cool down or else wear suitable protective gloves.
- Remove the evaporating flask, see Chapter 6.3.1 "Removing the evaporating flask", page 63.
- ► Turn off the coolant supply.
- Remove the receiving flask, see Chapter 6.3.2 "Removing the receiving flask", page 64.
- ▶ Dry the Rotavapor, see Chapter 7.9 "Removing solvent accumulations", page 71.
- Clean the Rotavapor and all glass components, see Chapter 7 "Cleaning and servicing", page 65.

6.3.1 Removing the evaporating flask

Fig. 42: Evaporating flask on Rotavapor R-300

1 Combi-clip

3 Locking button

- 2 Evaporating flask
- Slow down the rotation speed or reduce it to a minimum.
- Raise the rotary drive unit (see Chapter 6.1.5 "Raising and lowering rotary drive unit", page 53).
- ► Vent the Rotavapor.
- ► Turn off the rotary drive unit (set the rotation speed to 0 rpm).
- CAUTION! Risk of skin burns from hot evaporating flask. Check the temperature of the evaporating flask and, if necessary, allow it to cool down or else wear suitable protective gloves.
- Firmly hold the evaporating flask (2) and release the combi-clip (1) by screwing it counter-clockwise.
- Detach the evaporating flask.

If the evaporating flask sticks because of chemical residues, press the lock release button (3) and twist the combi-clip counter-clockwise to allow the flask to be removed.

6.3.2 Removing the receiving flask

Fig. 43: Receiving flask on Rotavapor R-300

- 1 Ball joint clamp 2 Receiving flask
- Slow down the rotation speed or reduce it to a minimum.
- Raise the rotary drive unit (see Chapter 6.1.5 "Raising and lowering rotary drive unit", page 53).
- Vent the Rotavapor.
- ► Turn off the rotary drive unit (set the rotation speed to 0 rpm).
- ► Firmly hold the receiving flask (2), remove the ball joint clamp (1) and remove the receiving flask.
- Make sure that any dripping condensate cannot cause any damage.

7

Cleaning and servicing

NOTE

Users may only carry out the servicing and cleaning operations described in this section.

Any servicing and repair work which involves opening up the housing may only be carried out by BUCHI service technicians.

- Use only genuine BUCHI consumables and spare parts in order to ensure correct operation of the device and preserve the warranty.
- Before carrying out any servicing work, empty the heating bath and all glass components.

7.1 Inspecting and cleaning the vapor duct

Fig. 44: Vapor duct on Rotavapor R-300

1 Flange nut

3 Combi-clip

- 2 Locking button
- Switch off the device.
- Remove the evaporating flask, see Chapter 6.3.1 "Removing the evaporating flask", page 63.
- Remove the receiving flask, see Chapter 6.3.2 "Removing the receiving flask", page 64.
- Remove the cooling condenser from the rotary drive unit. To do so, hold the cooling condenser firmly with one hand and unscrew the flange nut (1) with the other hand.
- ▶ Press and hold the lock release button (2) on the front of the rotary drive unit.
- ► Turn the combi-clip (3) clockwise until the vapor duct is released.
- Remove the vapor duct and visually inspect it for damage, wear marks and residues.
- Clean the vapor duct with a paper towel and water or ethanol.
- Refit the vapor duct and cooling condenser, see Fitting the vapor duct, vacuum gasket and cooling condenser.

7.2 Checking the system for leaks

Recommendation:

When using an Interface I-300/I-300 Pro there is the option of performing a leak test to check the system for leaks. For details, refer to the operating instructions of the Interface I-300/I-300 Pro.

Precondition:

- \square A vacuum pump with a pressure gauge is connected.
- \boxdot The system is dry.
- Make sure that the system is dry. Remove any solvent accumulations if necessary.
- Make sure that all flasks are fitted and the glass stopcock is closed.
- Connect the vacuum pump and evacuate the R-300 to a pressure of 50 mbar.
- Switch off the vacuum pump. If necessary, disconnect the vacuum tubing so as to exclude the vacuum pump as a possible source of a leak.
- Check the pressure after one minute.
- ⇒ If the pressure has risen by less than 5 mbar after one minute, the system is air-tight.

If the system is not air-tight:

- Check all seals, see Chapter 7.5 "Checking seals", page 68.
- Examine all tubing and replace if they are brittle or cracked.
- Grease ground glass joints if necessary.

NOTE

Damaged ground glass joints can also lead to leaks in the system.

7.3 Cleaning the splash guard (optional accessory)

- ▶ Wipe down the splash guard with a damp cloth.
- If heavily soiled, use ethanol or a mild detergent.

7.4 Fitting GL14 cap nut with tube seal

Fig. 45: Fitting GL14 cap nut with tube seal (example shows VacuBox)

- Tube seal 3 Tubing
- 2 GL14 cap nut

1

- Insert the tube seal (1) in the GL14 cap nut (2) ensuring it is straight.
 NOTICE! Risk of damaging tube seal. Make sure that the tube seal does not twist or jam in the GL14 cap nut.
- Loosely screw the GL14 cap nut together with tube seal onto the device concerned (example shows VacuBox) or the Woulff bottle.
- Carefully insert the end of the tube (3) into the GL14 cap nut and tube seal.
- ▶ Tighten the GL14 cap nut and tube seal.

7.5 Cl

Checking seals

The life of a seal depends on how much it is used and how well it is looked after.

Clean the seals if

- boiling delays occur during distillation.
- crystalline products are distilled.
- solvents remain in the condenser.
- after using corrosive solvents.

Replace the seals if

- the seals swell up.
- the vacuum is not achieved.
- the sealing lip is damaged.
- there is a risk of sample contamination.

Fig. 46: Seals on Rotavapor and cooling condenser

- 1 Coolant seal
- 2 Vacuum seal
- 3 Sensor seal

- 4 Cleaning hole seal
- 5 Coolant seal
- 6 Feed tubing seal
- 7 Vacuum connection seal

Precondition:

- ☑ The system leak test result was negative. See Chapter 7.2 "Checking the system for leaks", page 66
- ▶ Remove seals and inspect for damage and cracks.
- Rinse intact seals in water or ethanol and dry with a soft cloth.

 Replace damaged seals and check the corresponding glass contact faces for damage (e.g. wear marks).

NOTE

New seals require approx. 10 hours to achieve an optimum seal.

7.6 Cleaning the glassware

NOTICE

Clean glass components by hand in order to avoid damage.

NOTE

Inserting a thin copper wire into the coil of the secondary condenser reduces algae growth in the coil.

- Using a wash bottle, squirt ethanol into the cleaning hole of the cooling condenser and rinse it out.
- After rinsing allow the ethanol to drain out.
- ▶ Remove the ethanol from the receiving flask.
- Use an alkaline cleaning agent to remove stubborn dirt (e.g. algae in the condenser coil).
- ▶ Remove grease from joints.
- Carry out a distillation process in order to dry the glassware.
- Make sure that there is no fluid in the system.
 - \Rightarrow The glassware must be dry.
- Check the glassware for cracks.
- ► Dispose of damaged glassware.

7.7 Cleaning the heating bath

NOTICE

Risk of short circuit from fluid penetration into device

- ▶ Do not immerse heating bath or rotary drive unit in water or pour water over them.
- Only wipe down the casing with a damp cloth.

Clean the heating bath bowl if

- the water in the heating bath is contaminated.
- limescale deposits are starting to form.
- the steel surface of the heating bath is starting to rust.
- the oil in the oil bath has changed (colour, viscosity, etc.).
- ▶ Disconnect the power supply for the heating bath.
- ▶ Disconnect the power supply for the rotary drive unit.
- Allow the heating bath to cool down.
- Empty the heating bath.
- Remove small amounts of limescale in the bowl of the heating bath using nonabrasive cleaners (e.g. household cleaner and washing-up sponge).
- ▶ Use acetic acid to dissolve stubborn limescale deposits.
- Use an abrasive cloth/pad to remove rust.
- ▶ Rinse out the heating bath.

7.8 Cleaning the Woulff bottle

- Unscrew the glass part of the Woulff bottle from the holder.
- Clean the glass part with ethanol to remove residues.
- Screw the glass part back into the holder.

7.9 Removing solvent accumulations

Before any extended period in which the device is not used (e.g. overnight) all fluids must be removed from the device and the system dried.

- Fit a clean and dry evaporating flask and receiving flask. See Chapter 6.1.2 "Fitting the evaporating flask", page 50 and Chapter 6.1.4 "Fitting the receiving flask", page 52.
- Make sure that the glass stopcock is closed.
- ▶ Connect the vacuum pump and evacuate the Rotavapor as much as possible.
- ▶ Allow the vacuum pump to run for at least 2 to 3 minutes.
- Vent the Rotavapor.
- Check that all solvent accumulations have been removed.

7.10 Performing a firmware update

NOTE

A firmware update is carried out using the BUCHI Bluetooth® dongle and the BUCHI Monitor app.

For details of the BUCHI Bluetooth® dongle, see Chapter 10.2 "Spare parts and accessories", page 80.

Precondition:

- ☑ The BUCHI Bluetooth[®] dongle is installed and set up. For details, see *"instruction manual for BUCHI Bluetooth*[®] dongle *"*.
- ☑ The BUCHI Monitor app is installed. For details, see https://www.buchi.com/buchimonitor-app.

Fig. 47: Start screen view

- 1 List of systems
- 3 Images of the components
- 2 Settings
- 4 Position of the blue dot in the images of the components

- Start the app.
- Select the system from the list of systems.
- The blue dot on the images of the components indicates that an update is available.
- ► Tap the image of the component.

 - ⇒ The Update Firmware view shows a list of all the firmware updates that are to be carried out.
- ▶ Make sure that the notification bar shows [Firmware update].
 - ⇒ NOTICE! All of the components are updated. Selecting individual components is not possible.
- ► Tap [Update].

- Confirm execution of the update.
 - \Rightarrow The update is carried out.

NOTICE

Any interruption during a firmware update could cause damage to the instrument.

- ▶ Wait until the app indicates that the update has been fully completed.
- ▶ Wait until the update has been fully completed.
- The mobile device displays a message indicating that the update has been successfully completed.

8 Help with faults

| Fault | Possible cause | Remedy |
|-----------------------------------|--|--|
| Device does not work | Device is not connected to power supply | Check power supply (see Chapter 5.16 "Connecting the Rotavapor to the power supply", page 40). |
| | Fuse blown | Replace fuse (see Chapter 8.2.2 "Replacing fuse in heating bath base", page 77). If fault recurs, contact BUCHI Customer Service. |
| Heating bath fails to heat up | Device is not connected to power supply | Check power supply (see Chapter 5.16 "Connecting the Rotavapor to the power supply", page 40). |
| | High temperature cut-out has tripped | Reset the overheat safety cut-out (see Chapter 8.2.1 "Resetting overheat safety cut-out on heating bath", page 76). |
| | Fuse blown | Replace fuse (see Chapter 8.2.2 "Replacing fuse in heating bath base", page 77). If fault recurs, contact BUCHI Customer Service. |
| System leaking | Ground glass joints not greased | Grease ground glass joints. |
| | Tubing leaking | Replace tubing (see Chapter 5.12 "Connecting vacuum and coolant tubing" page 34). |
| | Seal defective | Replace seal (see Chap- ter 7.5 "Checking seals", page 68). |
| Electric lift does not operate | Heating Bath B-300 Base and heating bath positioned too far to the left. | Move Heating Bath B-300 Base to the right until it snaps into position. |

8.1 Faults, possible causes and remedies

| Fault | Possible cause | R | emedy |
|---|---|---|--|
| Vacuum is not achieved | Back-evaporation from the re- ceiving flask | | Empty the receiving flask (see Chapter 6.3.2 "Removing the receiving flask", page 64). |
| | Temperature difference be- tween vapor and coolant less than 20 °C | | Increase cooling (see Chapter 6.2.3 "Adjusting distillation conditions", page 60). |
| | System leaking | | Check system for leaks (see Chapter 7.2 "Checking the system for leaks", page 66). |
| | If using a glass filter pump: wa- ter pressure of glass filter pump too low | • | Increase water flow (see pump operating instruc-tions). |
| | Vacuum pump too weak | | Use suitably dimensioned vacuum pump. |
| Optimum distilla- tion not achieved | Too much back-evaporation from the receiving flask (espe- cially with solvent mixtures) | | Empty receiving flask and restart distillation (see Chapter 6.3.2 "Removing the receiving flask", page 64, Chapter 6.1.4 "Fitting the receiving flask", page 52 and Chapter 6.2 "Performing distillation", page 57). |
| | Other faults in distillation process (e.g. sudden cooling, too little heat flow, etc.) | | Check temperatures of heating bath and coolant and adjust as necessary (see Chapter 6.1.1 "Preparing the heating bath", page 49 and/or cooler operating instructions). Lower pressure until distilla- tion resumes (see vacuum pump operating instructions). |

8.2 Resetting safety functions

8.2.1 Resetting overheat safety cut-out on heating bath

The overheat safety cut-out trips if oil is used in the Heating Bath B-301 or the temperature control fails. In that case, the power supply for the heating bath is switched off. If the wrong heating fluid has been used for the Heating Bath B-301, the overheat safety cut-out can be reset.

The overheat safety cut-out is on the underneath of the heating bath.

Risk of skin burns from hot components

▶ Do not touch hot components unless wearing suitable protective gloves.

Fig. 50: Undersides of Heating Baths B-301 and B-305

- 1 Overheat safety cut-out on B-305 2 Overheat safety cut-out on B-301
- Switch off the device.
- Unplug the power supply for the heating bath and rotary drive unit.
- Allow the heating bath to cool down then empty it.
- Using a narrow object or screwdriver, press the red pin (1)/(2) on the underside of the heating bath.
- \Rightarrow The overheat safety cut-out is reset.

8.2.2 Replacing fuse in heating bath base

The fuse is on the rear of the heating bath base.

Fig. 51: Fuse in heating bath base

- 1 Fuse rating plate 2 Fuse holder
- ▶ Allow the heating bath to cool down then lift it carefully off the base.
- ▶ Slide the base to the right off the base of the Rotavapor.
- ► Disconnect the power cord.
- Open the fuse holder (2) with a large screwdriver.
- ▶ Replace the blown fuse with an intact one of the same rating.
- Screw the fuse holder (2) back in.
- Reconnect the power cord.
- Slide the base back onto the Rotavapor® base from the right.

NOTE

The fuse must match the specifications on the fuse rating plate.

9 Taking out of service and disposal

9.1 Taking out of service

- Remove all fluids from the glass components (see Chapter 7.9 "Removing solvent accumulations", page 71).
- Switch off the device.
- Unplug the power supply for the heating bath and rotary drive unit.
- ► Remove all glass components.

9.2 Disposal

The operator is responsible for proper disposal of the Rotavapor®.

► When disposing of equipment observe the local regulations and statutory requirements regarding waste disposal.

10 Appendix

10.1 Solvent table

| Solvent | Formula | Molar mass in g/ mol | Evaporation en- ergy in J/g | Boiling point in °C at 1013 mbar | Density in g/cm³ | Vacuum in mbar for 40 °C boil- ing point |
|--------------------------------------|----------------------------------|----------------------------|--------------------------------|---|---------------------|---|

10.2.9 Accessories

Heating baths

| | Order no. | Image |
|---|-----------|-------|
| Heating Bath B-301, 110V, not incl. Base B-300 | 11B301002 | |
| For up to 1 Liter evaporating flasks. For temperatures up to 95°C. Meant to be used with water as heating media. | | |
| Heating Bath B-301, 230V, not incl. Base B-300 | 11B301001 | AD |
| For up to 1 Liter evaporating flasks. For temperatures up to 95 °C. Meant to be used with water as heating media. | | |
| Heating Bath B-301, 110V, incl. Base B-300 | 11B301102 | |
| For up to 1 Liter evaporating flasks. For temperatures up to 95 °C. Meant to be used with water as heating media. | | |
| Heating Bath B-301, 230V, incl. Base B-300 | 11B301101 | |
| For up to 1 Liter evaporating flasks. For temperatures up to 95 °C. Meant to be used with water as heating media. | | |

| | Order no. | Image |
|---|-----------|-------|
| Heating Bath B-305, 110V, not incl. Base B-300, 110V | 11B305002 | |
| For up to 5 Liter evaporating flasks. For temperatures up to 220 °C. Meant to be used with water or oil as heating media. | | |
| Heating Bath B-305, 230V, not incl. Base B-300 | 11B305001 | |
| For up to 5 Liter evaporating flasks. For temperatures up to 220 °C. Meant to be used with water or oil as heating media. | | |
| Heating Bath B-305, 110V, incl. Base B-300 | 11B305102 | |
| For up to 5 Liter evaporating flasks. For temperatures up to 220 °C. Meant to be used with water or oil as heating media. | | |
| Heating Bath B-305, 230V, incl. Base B-300 | 11B305101 | |
| For up to 5 Liter evaporating flasks. For temperatures up to 220 °C. Meant to be used with water or oil as heating media. | | |
| Heating Bath B-305, 110V, for R-21x, incl. Base | 11B305112 | |
| For up to 5 Liter evaporating flasks. For temperatures up to 220 °C. Meant to be used with water or oil as heating media. Included: Adapter for Rotavapor® R-21x. | | |
| Heating Bath B-305, 230V, for R-21x, incl. Base | 11B305111 | |
| For up to 5 Liter evaporating flasks. For temperatures up to 220 °C. Meant to be used with water or oil as heating media. Included: Adapter for Rotavapor® R-21x. | | |

Heating bath accessories

| | Order no. | Image |
|---|-----------|-------|
| Adapter B-300. For Heating Bath B-305 | 11061317 | |
| Required when Heating Bath B-305 is used with a Ro- tavapor® R-210, R-215 or R II. Not compatible with Heating Bath B-301. | | |
| Dewar accessory, set. Incl. Dewar container and adapter | 11066662 | |
| For sample preparation in freeze drying. To be used with dry ice and ethanol / isopropanol / acetone or sep- arately with liquid nitrogen. Compatible with Heating Bath B-300 (not plugged in during operation) and Ro- tavapor® R-300. | | |
| Dewar container, not incl. adapter | 11066645 | |
| For sample preparation in freeze drying. To be used with dry ice and ethanol / isopropanol / acetone or sep- arately with liquid nitrogen. To be used only with adapter, Heating Bath Base B-300 (not plugged-in dur- ing operation) and Rotavapor R-300. | | |
| Lid. For Heating Bath B-305 | 11059500 | |
| To save energy and to minimize loss of water when heating bath is not in use. | | |

| | Order no. | Image |
|---|-----------|--------|
| Protection shield, Operator protection for heating bath | 11061402 | |
| For Heating Bath B-301 and B-305. Material: 4 mm thick PMMA. | | |
| Splash shield, Operator protection against splashes | 11064768 | |
| For Heating Bath B-301 and B-305. Material: 6 mm thick polycarbonate. | | |
| Protective cover. For Heating Bath B-300 base | 11064111 | \sim |
| Used for protection of the heating bath display. | | |

Further accessories heating baths

| | Order no. |
|---|-----------|
| Heating bath balls. 450 pcs., PP, Ø10 mm | 036405 |
| To reduce energy consumption of heating bath and for less evaporation of the heating medium. For temperatures up to 100 °C. | |

Tubing

| | Order no. |
|--|-----------|
| Tubing. FEP, Ø6/8 mm, transparent, per m | 027900 |
| Use: Vacuum, cooling media. | |
| Insulation tubing. Synthetic rubber, Ø10/23 mm, black, per m | 028696 |
| For insulation of cooling media. Meant to be used with silicone tubing (004134). | |
| Tubing. Natural rubber, Ø6/16 mm, red, per m | 017622 |
| Use: Vacuum. | |
| Tubing. Nylflex, PVC-P, Ø8/14 mm, transparent, per m | 004113 |
| Tubing. PTFE, Ø4.7/5.5 mm, transparent, 330 mm | 000646 |
| Use: To introduce solvent into evaporating flask during distillation. | |
| Tubing. PTFE, Ø4.7/5.5 mm, transparent, 460 mm | 000643 |
| Use: To introduce solvent into evaporating flask during distillation. | |
| Tubing. PTFE, Ø8/10 mm, white, per m | 027277 |
| Use: Vacuum, feeding (industrial Rotavapor®). | |
| Tubing. Silicone, Ø6/9 mm, transparent, per m | 004133 |
| Use: Cooling media. | |
| Tubing. Synthetic rubber, Ø6/13 mm, black, per m | 11063244 |
| Use: Vacuum. | |

Further accessories

| | Order no. | Image |
|---|-----------|-------|
| StatusLight cpl., incl. communication cable | 11068959 | |
| Indicates the status of the instrument (instrument is ready to use, has an error or is in operation). | | |

| | Order no. | Image |
|--|-----------|----------------|
| BUCHI Bluetooth® Dongle, connects instrument to smartphone via Bluetooth® | 11067770 | |
| Needed for firmware updates, eSupport or quoting wear parts. | | |
| AutoDest sensor. Incl. cap nut, seal GL14 | 11059225 | |
| For automatic distillation. Measures temperature of cooling media and the vapor temperature. Vacuum is adjusted according to cooling capacity of condenser. Meant to be used with the Interface I-300 / I-300 Pro and glass assembly V, HP or S. | | |
| Condensate trap. | 11062955 | ß |
| Condenser V and HP, grey, TPE, hose connector Ø8 mm. Collects and drains condensate which may accu- mulate on the condenser. | | |
| Condensate trap. | 11061985 | ß |
| Condenser V and HP, green, TPE, hose connector Ø8 mm. Collects and drains condensate which may accumulate on the condenser. | | |
| Cooling water valve. 24VAC | 031356 | æ |
| Valve opens cooling water feed during distillation. Meant to be used with a vacuum controller/interface. | | |
| Extraction thimbles, Set. 25 pcs, 43 x 118 mm, cellulose | 018106 | 0 |
| For Soxhlet extraction unit. | | |
| Flask holder. EPDM, slip free | 048618 | |
| Holder for round-bottom flasks (50-5000 mL). | | |
| Flask holders, set. 5 pcs., EPDM, slip free | 11059916 | _@ |
| Holder for round-bottom flasks (50-5000 mL). | | 9 99 93 |
| Foam sensor. Incl. holder | 11061167 | Ø |
| Prevents sample from foaming into the condenser by aeration of system temporarily. Meant to be used with the Interface I-300 / I-300 Pro. | | |
| IQ/OQ. R-300 en | 11063608 | totan". Ann. |
| Official BUCHI documents. | | |
| Lab grease. Glisseal 40 (60 g) | 048197 | |
| To grease joints in order to increase tightness of sys- tem. | | 0 |

| | Order no. | Image |
|--|-----------|--|
| Level sensor. Incl. O-ring, cable, rubber band | 11060954 | <u> </u> |
| Prevents an overflow in the receiving flask of con- denser/secondary condenser. Placed on receiving flask. Meant to be used with the Interface I-300 / I-300 Pro. | | |
| Repeating OQ. R-300 en | 11063609 | Manager & Same |
| Official BUCHI documents. | | |
| Power plug fixation. For R-300 | 11063710 | |
| Used to fixate the power plug into Rotavapor®. | | |
| Set earthquake fastener. Lug for backside | 11062386 | |
| To fasten device on lab bench. | | 000 |
| Thread adapter. For vacuum connection, SVL22/ GL14 | 040871 | |
| Use: To switch vacuum connection from a Rotavapor® to Syncore® vacuum distributor (037686). | | |
| Vacuum connection. Incl. drain valve, hose barb Ø 8 mm, BJ35/20 | 001006 | |
| Connection piece for aeration of the system, placed be- tween condenser and receiving flask. | | |
| Vacuum valve. Magnetic valve, 24V/4W, Mini- DIN, 1.5 m | 11060706 | |
| Flow valve without flask, meant to be used with a cen- tralized vacuum source or an unregulated vacuum pump. Meant to be used with the Interface I-300 /I -300 Pro. | | Solution of the second se |
| Vapor temperature sensor. Incl. cap nut, seal GL14 | 11060707 | F C |
| Measures the vapor temperature inside the system. Meant to be used with the Interface I-300 / I-300 Pro. | | |
| Water jet pump. Plastic | 002913 | A |
| Used when tap water is used to generate vacuum. | | |
| Water jet pump, B-767: Magnetic valve (2 pcs.), FFKM, 24V | 031357 | |
| Used when tap water is used to generate vacuum. In- clusive: Cooling water valve. Meant to be used with a vacuum controller/interface. | | Just Dy |
| Water regulation nozzle. Flow regulator, incl. hose clamp, sieve | 011606 | |
| Used when tap water is used to generate vacuum. Reduces water consumption. | | |

| | Order no. | Image |
|--|-----------|--|
| Woulff bottle. 125 mL, P+G, incl. holder | 11059905 | e se |
| For trapping particles and droplets and for pressure equalization. | | re l |
| Woulff bottle. 3-neck, 800 mL, P+G. | 025519 | |
| For trapping particles and droplets and for pressure equalization. | | |
| Manometer with needle valve. Incl. vacuum gauge, not incl. holder | 047391 | |

Glassware

Glass assemblies

| | Order no. | Image |
|---|-----------|--------------|
| Glass assembly A. Diagonal condenser, 1500 cm ² | 048168 | P |
| For standard distillations, used with recirculating chiller or tap water. | | $/ \bigcirc$ |
| Features: Cleaning hole on top. Content: 1 L receiving flask, required tubings, ball joint clamp, stopcock, feeding tubing. | | |
| Not inclusive: Evaporating flask, vapor duct, vacuum gasket, holder. | | |
| Glass assembly A. Diagonal condenser, 1500 cm ² , P+G | 048169 | |
| For standard distillations, used with recirculating chiller or tap water. | | |
| Features: Cleaning hole on top. Content: 1 L receiving flask (P+G), required tubings, ball joint clamp, stop-cock, feeding tubing. | | |
| Not inclusive: Evaporating flask, vapor duct, vacuum gasket, holder. | | |
| Glass assembly BY. Vertical intensive condenser, reflux, 1300cm ² | 048176 | |
| For particularly efficient condensation with double jacket condenser as well as for reflux distillations with distributor and shut-off valve. Used with recirculating chiller or tap water. | | |
| Features: Double jacket condenser. Additional joint on top of the condenser for flexible expansion (SJ29/32). Connection for vapor temperature sensor. Content: 1 L receiving flask, required tubings, ball joint clamp, stop- cock, feeding tubing, distributor. | | |
| Not inclusive: Evaporating flask, vapor duct, vacuum gasket, holder. | | |

| | Order no. | Image |
|--|-----------|-------|
| Glass assembly BY. Vertical intensive condenser, reflux, 1300 cm^2 , P+G | 048297 | |
| For particularly efficient condensation with double jacket condenser as well as for reflux distillations with distributor and shut-off valve. Used with recirculating chiller or tap water. | | |
| Features: Double jacket condenser. Additional joint on top of the condenser for flexible expansion (SJ29/32). Connection for vapor temperature sensor. Content: 1 L receiving flask (P+G), required tubings, ball joint clamp, stopcock, feeding tubing, distributor. | | 6 |
| Not inclusive: Evaporating flask, vapor duct, vacuum gasket, holder. | | |
| Glass assembly C. Cold trap, 500 cm ² | 040640 | Ø |
| For distillations of low-boiling point solvents. No need of cooling liquid, but e.g. dry ice. Content: 1 L receiving flask, ball joint clamp, stopcock, feeding tubing. | | |
| Not inclusive: Evaporating flask, vapor duct, vacuum gasket, holder. | | |
| Glass assembly C. Cold trap, 500 cm ² , P+G-LT | 040642 | Ø |
| For distillations of low-boiling point solvents. No need of cooling liquid, but e.g. dry ice. Application tempera- ture: -70 to 40 °C. Content: 1 L receiving flask (P+G- LT), ball joint clamp, stopcock, feeding tubing. | | |
| Not inclusive: Evaporating flask, vapor duct, vacuum gasket, holder. | | |
| Glass assembly CR. Cold trap reflux, 500 cm ² | 048292 | Ø |
| For reflux distillations with distributor and shut-off valve as well as for distillation of low-boiling point solvents. No need of cooling liquid, but e.g. dry ice. Content: 1 L receiving flask, ball joint clamp, stopcock, feeding tub- ing, distributor. | | |
| Not inclusive: Evaporating flask, vapor duct, vacuum gasket, holder. | | |
| Glass assembly CR. Cold trap reflux condenser, 500 cm², P+G-LT | 048293 | |
| For reflux distillations with distributor and shut-off valve as well as for distillation of low-boiling point solvents. No need of cooling liquid, but e.g. dry ice. Application temperature: -70 to 40 °C. Content: 1 L receiving flask, ball joint clamp, stopcock, feeding tubing, distributor. | | |
| | | |

| | Order no. | Image |
|--|-----------|-------|
| Glass assembly E. Expansion condenser, 1500 cm ² | 11061112 | |
| Optimised for distillations of foaming substances and bumping sample solutions. Used with recirculating chiller or tap water. | | |
| Features: Descending condenser with expansion ves- sel. Cleaning hole on top. Connection for vapor tem- perature sensor. Content: 1 L receiving flask, required tubings, ball joint clamp, stopcock, feeding tubing, holder. | | |
| Not inclusive: Evaporating flask, vapor duct, vacuum gasket. | | |
| Glass assembly E. Expansion condenser, 1500 cm ² , P+G | 11061113 | |
| Optimised for distillations of foaming substances and bumping sample solutions. Used with recirculating chiller or tap water. | | |
| Features: Descending condenser with expansion ves- sel. Cleaning hole on top. Connection for vapor tem- perature sensor. Content: 1 L receiving flask (P+G), re- quired tubings, ball joint clamp, stopcock, feeding tub- ing, holder. | | |
| Not inclusive: Evaporating flask, vapor duct, vacuum gasket. | | |
| Glass assembly S. Vertical condenser reflux, 1500 cm ² | 048290 | |
| For reflux distillations with distributor and shut-off valve. Used with recirculating chiller or tap water. | | |
| Features: Cleaning hole on top. Connection for vapor temperature sensor. Inner glass tube. Content: 1 L re- ceiving flask, required tubings, ball joint clamp, stop- cock, feeding tubing, distributor. | | |
| Not inclusive: Evaporating flask, vapor duct, vacuum gasket, holder. | | |
| Glass assembly S. Vertical condenser reflux, 1500 cm ² , P+G | 048291 | |
| For reflux distillations with distributor and shut-off valve. Used with recirculating chiller or tap water. | | |
| Features: Cleaning hole on top. Connection for vapor temperature sensor. Inner glass tube. Content: 1 L re- ceiving flask (P+G), required tubings, ball joint clamp, stopcock, feeding tubing, distributor. | | |
| Not inclusive: Evaporating flask, vapor duct, vacuum gasket, holder. | | |
| Glass assembly V. Vertical condenser, 1500 cm ² | 11062432 | |
| For standard distillations, used with recirculating chiller or tap water. | | |
| Features: Large cleaning hole on top (SVL22). Con- nection for vapor temperature sensor. Inner glass tube. Inner glass plate. Content: 1 L receiving flask, required tubings, ball joint clamp, stopcock, feeding tubing. | | |
| Not inclusive: Evaporating flask, vapor duct, vacuum gasket, holder. | | |

| | Order no. | Image |
|---|-----------|-------|
| Glass assembly V. Vertical condenser, 1500 cm ² , P+G | 11062433 | |
| For standard distillations, used with recirculating chiller or tap water. | | |
| Features: Large cleaning hole on top (SVL22). Con- nection for vapor temperature sensor. Inner glass tube. Inner glass plate. Content: 1 L receiving flask (P+G), required tubings, ball joint clamp, stopcock, feeding tubing. | | |
| Not inclusive: Evaporating flask, vapor duct, vacuum gasket, holder. | | |
| Glass assembly HP, Incl. condenser, supplemen- tary set and holder | 11066561 | |
| High performance condenser, 3000 cm ² , for faster process, greater distillation rates and fewer emissions of solvents, used with recirculating chiller or tap water. Features: Large cleaning hole on top (SVL22). Con- nection for vapor temperature sensor. Inner glass tube. Inner glass plate. Contents: 1 L receiving flask, re- quired tubings, ball joint clamp, stopcock, feeding tub- ing, holder. | | |
| Not included: Evaporating flask, vapor duct, vacuum gasket. Compatible with Rotavapor® R-300, R-215 and R-210. | | |
| Glass assembly HP, Incl. condenser P+G, sup- plementary set and holder | 11066562 | |
| High performance condenser, 3000 cm ² , P+G, for faster process, greater distillation rates and fewer emissions of solvents, used with recirculating chiller or tap water. Features: Large cleaning hole on top (SVL22). Connection for vapor temperature sensor. In- ner glass tube. Inner glass plate. Contents: 1 L receiv- ing flask (P+G), required tubings, ball joint clamp, stop- cock, feeding tubing, holder. | | |
| Not included: Evaporating flask, vapor duct, vacuum gasket. Compatible with Rotavapor® R-300, R-215 and R-210. | | |

Accessories for glass assemblies

| | Order no. | Image |
|--|-----------|----------|
| Condenser holder.For glass assembly V/HP/C/S/ CR/BY | 048180 | |
| Content: Holding rod, rubber band, cross sleve. | | |
| Condenser holder. For Glass assembly E | 048181 | |
| Content: Holding rod, bride, cross sleeve. | | 9 |

| | Order no. | Image |
|--|-----------|--------|
| Extraction unit Soxhlet, 200mL, incl. extraction part, reduction part | 011744 | |
| For Soxhlet extraction applications with a Rotavapor® R-300. Meant to be used with glass assembly S. Condenser holder is included. | | N STA |
| Extraction unit Soxhlet, 500mL, incl. extraction part, reduction part | 011745 | |
| For Soxhlet extraction applications with a Rotavapor® R-300. Meant to be used with glass assembly S. Condenser holder is included. | | E Star |

Bump trap adapters

| | Order no. | Image |
|-----------------------------------|-----------|-------|
| Glass, SJ24/40, 175 mm | 11056919 | |
| Glass, SJ29/32, 160 mm | 11056920 | |
| Glass, Reitmeyer, SJ24/40, 150 mm | 036577 | |
| Glass, Reitmeyer, SJ29/32, 135 mm | 036576 | |

Evaporating flask

Drying flasks

| | Order no. |
|--|-----------|
| Glass, SJ24/40, 500 mL | 011579 |
| With 4 indents for better mixing/drying. | |
| Glass, SJ29/32, 500 mL | 000452 |
| With 4 indents for better mixing/drying. | |
| Glass, SJ24/40, 1000 mL | 000420 |
| With 4 indents for better mixing/drying. | |
| Glass, SJ29/32, 1000 mL | 000453 |
| With 4 indents for better mixing/drying. | |
| Glass, SJ24/40, 2000 mL | 011580 |
| With 4 indents for better mixing/drying. | |
| Glass, SJ29/32, 2000 mL | 000454 |
| With 4 indents for better mixing/drying. | |

Beaker flasks

| | Order no. | Image |
|--|-----------|-------|
| Beaker flask, Drying, bayonet type, flat bottom, SJ24/40, 500 mL | 11063159 | |
| Bayonet mount type Ø75 mm. With 4 indents for better mixing/drying. Working volume 150 mL. Content: 1 coupling piece, 1 seal, 1 flask and 1 beaker fastener. | | |
| Beaker flask, Drying, bayonet type, flat bottom, SJ24/40, 1500 mL | 11063161 | |
| Bayonet mount type Ø110 mm. With 4 indents for bet- ter mixing/drying. Content: 1 coupling piece, 1 seal, 1 flask and 1 beaker fastener. | | A D |
| Beaker flask, Drying, bayonet type, flat bottom, SJ29/32, 500 mL | 11063158 | |
| Bayonet mount type Ø75 mm. With 4 indents for better mixing/drying. Working volume 150 mL. Content: 1 coupling piece, 1 seal, 1 flask and 1 beaker fastener. | | |
| Beaker flask, Drying, bayonet type, flat bottom, SJ29/32, 1500 mL | 11063160 | |
| Bayonet mount type Ø110 mm. With 4 indents for bet- ter mixing/drying. Content: 1 coupling piece, 1 seal, 1 flask and 1 beaker fastener. | | |
| Beaker flask, Evap., bayonet type, flat bottom, SJ24/40, 500 mL | 11063155 | |
| Bayonet mount type Ø75 mm. Working volume 150 mL. Content: 1 coupling piece, 1 seal, 1 flask and 1 beaker fastener. | | |

| | Order no. | Image |
|---|-----------|------------|
| Beaker flask, Evap., bayonet type, flat bottom, SJ24/40 1500 mL | 11063157 | Ö |
| Bayonet mount type Ø110 mm. Content: 1 coupling piece, 1 seal, 1 flask and 1 beaker fastener. | | |
| Beaker flask, Evap., bayonet type, flat bottom, SJ29/32, 500 mL | 11063154 | |
| Bayonet mount type Ø75 mm. Working volume 150 mL. Content: 1 coupling piece, 1 seal, 1 flask and 1 beaker fastener. | | |
| Beaker flask, Evap., bayonet type, flat bottom, SJ29/32 1500 mL | 11063156 | Ċ |
| Bayonet mount type Ø110 mm. Content: 1 coupling piece, 1 seal, 1 flask and 1 beaker fastener. | | |
| Beaker flask, Evap., bayonet type, round bottom, SJ24/40, 1500 mL | 11065719 | Ö |
| Bayonet mount type Ø110 mm. Use: Easy cleaning and collection of solid residue. Content: 1 coupling piece, 1 seal, 1 flask and 1 beaker fastener. | | |
| Beaker flask, Evap., bayonet type, round bottom, SJ29/32, 1500 mL | 11065718 | Ë |
| Bayonet mount type Ø110 mm. Use: Easy cleaning and collection of solid residue. Content: 1 coupling piece, 1 seal, 1 flask and 1 beaker fastener. | | |
| Beaker flask, Evap., bayonet type, pear shape, SJ24/40, 4000 mL | 11065691 | Ċ |
| Bayonet mount type Ø110 mm. Appropriate for natural product applications. Content: 1 coupling piece, 1 seal, 1 flask and 1 beaker fastener. | | |
| Beaker flask, Evap., bayonet type, pear shape, SJ29/32, 4000 mL | 11065690 | Ê |
| Bayonet mount type Ø110 mm. Appropriate for natural product applications. Content: 1 coupling piece, 1 seal, 1 flask and 1 beaker fastener. | | \bigcirc |

Receiving flask with tap

| | Order no. | Image |
|--|-----------|-------|
| Receiving flask with drain valve. Glas, BJ35/20, 1000 mL, P+G, PTFE | 036919 | |

Receiving flask

| | Order no. |
|--|-----------|
| Glass, BJ35/20, 50 mL | 000421 |
| Glass, BJ35/20, 100 mL | 000422 |

| Glass, BJ35/20, 1000 mL, P+G-LT | 040775 |
| Application temperature: -70 to 40 °C. | |
| Glass, BJ35/20, 2000 mL | 000426 |
| Glass, BJ35/20, 2000 mL, P+G | 025265 |
| Glass, BJ35/20, 3000 mL, P+G-LT | 040777 |
| Application temperature: -70 to 40 °C. | |

Vapor ducts

| SJ | 29/32 | 24/40 | 29/42 | 24/29 |
|--|----------|----------|----------|----------|
| For glass assembly V, C, S, E, CR, BY, HP | 11062186 | 11062187 | 11062464 | 11062909 |
| For glass assembly A | 11062267 | 11062268 | 11062269 | |
| For glass assembly V, C, HP (analytical) | 11062465 | 11062466 | 11062467 | |
| Vapor duct with frit, Ø 26 mm, SJ29/32, incl. Combi-Clip | 11057297 | | | |
| For powder drying. To prevent pow- der from getting into the condenser. For glass assembly V, C, S, E, BY, HP and CR. | | | | |
| For high temperatures 29/32, short cpl. | 11061837 | | | |
| Content: Combi clip, vapor duct HT, ring NS 34/32 on 30/32 | | | | |

Stopcocks

| | Order no. | Image |
|--|-----------|----------|
| For condenser C/CR, glass, SJ18.8/38 | 040628 | |
| For aeration of the system. For cold trap outer part. | | - D |
| Professional, glass, SJ18.8/38 | 000637 | TIM |
| For aeration of the system. Less cross-contamination compared to standard-stopcock (040627). | | Ja-r |
| PTFE, incl. 3-way valve | 11058814 | 857 |
| For feeding of solvents and aeration of the system. For applications when grease should be avoided. Used in- stead of standard-stopcock (040627). Content: Inlet tubing 300mm, backfeed tubing 600mm, cap nut GL10. | | V |
| Standard, glass, SJ18.8/38 | 040627 | TIM |
| For aeration of the system. | | Ja-r |

Distillation spiders

| | Order no. |
|---|-----------|
| Glass, SJ24/40, incl. 100 mL flask (5pcs) | 011575 |
| Glass, SJ24/40, incl. 50 mL flask (5pcs) | 011574 |
| Glass, SJ29/32, incl. 100 mL flask (5pcs) | 001333 |
| Glass, SJ29/32, incl. 20 mL cyl. flask (12pcs) | 001335 |
| Glass, SJ29/32, incl. 20 mL cyl. flask (20pcs) | 001336 |
| Glass, SJ29/32, incl. 20 mL cyl. flask (6pcs) | 001334 |
| Glass, SJ29/32, incl. 50 mL flask (5pcs) | 001332 |
| Evaporating flask, For distillation spider, cylindric, SJ14/23, 20 mL | 000477 |

Adaptor

| | Order no. | Image |
|---|-----------|-------|
| Intermediate piece with valve, Incl. drain valve, hose connection Ø8 mm, BJ35/20 | 11063430 | |
| Connection piece with 3-way valve, for aeration of the system. Placed between condenser and receiving flask. Allows to remove and empty the receiving flask during the evaporating process. | | OR & |

| | Order no. | Image |
|--|-----------|----------|
| Set Rotavapor® connection | 048740 | |
| Combining the Multivapor with the Rotavapor® re- quires a T-shaped glass connector for the condenser of the rotary evaporator. The T-piece consist of two spherical joints for the condenser assembly and a SVL 22 joint for the vacuum tube. The length of the tube is 400 mm. | | S |
| Vacuum connection. Incl. drain valve, hose barb Ø 8 mm, BJ35/20 | 001006 | |
| Connection piece for aeration of the system, placed be- tween condenser and receiving flask. | | |

| For 1500 mL round and flat bottom and for 4000 mL pear shape beaker flasks. | | |
| Coupling piece, Bayonet mount type, glass, SJ29/32, Ø110 mm | 11059187 | |
| For 1500 mL round and flat bottom and for 4000 mL pear shape beaker flasks. | | |
| Distillation spider. Glass, SJ29/32 (for 20 flasks), not incl. flasks | 000476 | |
| Distillation spider. Glass, SJ24/40 (for 5 flasks), not incl. flasks | 000466 | |
| Distillation spider. Glass, SJ29/32 (for 12 flasks), not incl. flasks | 000475 | |
| Distillation spider. Glass, SJ29/32 (for 5 flasks), not incl. flasks | 000471 | |
| Distillation spider. Glass, SJ29/32 (for 6 flasks), not incl. flasks | 000474 | |
| Distribution head. For assembly S/CR/BY, P+G, incl. cap nut GL10 | 040658 | Fried Contraction |

| | Order no. | Image |
|---|-----------|---------|
| Distribution head. For glass assembly S/CR/BY, incl. cap nut GL10 | 040657 | STOR ST |
| Distribution head. For glass assembly E, incl. cap nut GL10 | 040661 | |
| Distribution head. For glass assembly E, P+G, incl. cap nut GL10 | 040663 | |
| Expansion vessel. For Glass assembly E, glass, incl. screw cap GL14 | 001002 | |
| Expansion vessel. For Apparatus E, glass, P+G, inc. GL14 union nut | 033507 | |
| U-tube. For assembly E, Glass, incl. screw cap GL14 | 001003 | |
| U-tube. For assembly E, Glass, P+G incl. screw cap GL14 | 033508 | |
| Cold finger. For condenser C/CR | 000672 | |
| Vacuum connection. For glass assembly BY, vac- uum piece To close the top hole (NS29/32) of the condenser if no expansion is used. Openings with screw cap SVL15 (on top) and with cap nut GL14 (sideward). | 035026 | |
| Vacuum connector. For glass assembly E, incl. hose barb GL14 | 001004 | |

Seals

| | Order no. |
|---|-----------|
| Gasket, For 1.5 L and 4 L beaker flask, Ø100 mm, incl. O-ring | 034152 |
| PTFE coated gasket is used to seal the beaker flask. | |
| For beaker flask 500 mL, Ø68 mm, incl. O-ring | 034772 |
| PTFE coated seal for beaker flask. | |

| | Order no. |
|--|-----------|
| Set. For condenser C/CR, O-ring EPDM/PTFE | 027462 |
| Seal between cold trap outer part and cold finger. | |
| Set. For Woulff bottle/valve unit | 045544 |
| Content: O-ring (048406, 5pcs), O-ring (047169, 5pcs). | |
| Set. For Woulff bottle/valve unit | 045545 |
| Content: O-ring (048406, 5pcs), O-ring (047169, 5pcs), spare parts for valve unit (047258), seal (047165). | |
| Seal, SVL sealing for foam sensor | 11058958 |

Condenser(s)

| Condenser S. Vertical condenser reflux, 1500 cm ² , P+G | 040653 | |
| Condenser V. Vertical condenser, 1500 cm ² | 11059368 | |
| Condenser V. Vertical condenser, 1500 cm ² , P+G | 11059369 | |
| Condenser HP, High performance condenser, 3000 cm ² Compatible with Rotavapor® R-300, R-215 and R-210. | 11065785 | |
| Condenser HP, High performance condenser, 3000 cm ² , P+G Compatible with Rotavapor® R-300, R-215 and R-210. | 11065786 | |

Further spare parts

| | Order no. | Image |
|--|-----------|-------|
| Ball joint clamp. For BJ35/20 | 003275 | |
| To fasten receiving flask on condenser/secondary con- denser. | | |

| | Order no. | Image |
|---|-----------|------------|
| Beaker fastener, Connection with bayonet mount, for 1.5 and 4 L | 11059851 | |
| For 1500 mL round and flat bottom and for 4000 mL pear shape beaker flasks. | | |
| Beaker fastener, Connection with bayonet mount, for 500 $\ensuremath{\text{mL}}$ | 11059810 | |
| For beaker flask 500 mL. | | |
| Capacitve switch, For level sensor | 11055914 | ST REI |
| Combi-Clip, Not incl. vapor duct | 11059770 | |
| Combi-Clip with snap lock mechanism to fasten evapo- rating flask on vapor duct. | | |
| Combi-Clip, set, 50pcs, not incl. vapor duct | 11063308 | |
| Combi-Clip with snap lock mechanism to fasten evapo- rating flask on vapor duct. | | |
| Cross sleeve (1 pc.) | 027344 | |
| Deflector rings, set. Drain sleeve, EPDM, black, Ø41/55 mm | 040822 | |
| Drains off condensate which may accumulate at the condenser. | | |
| Drain disc. PTFE, Ø5.1/14 mm | 040625 | \bigcirc |
| Flange screwed connection. For Glass assembly V/HP/C/A | 11062387 | |
| Content: Flange nut, pressure spring. | | |
| Flange screwed connection-reflux. For Glass as- sembly E/S/BY/CR | 048080 | |
| Content: Flange nut, reflux part, pressure spring, O-ring FKM. | | |
| Fuses, set. 10pcs, 6.3AT, 20 mm, Ø5 mm | 022561 | |
| Fuses, set. 10pcs, 12.5AT, 20 mm, Ø5 mm | 047939 | |

| | Order no. | Image |
|--|-----------|--------|
| Handle, For top cover heating bath (B-305, 11059500) | 11059502 | |
| Handle with top cover is used for covering the heating bath after the experiment is over. | | |
| Heating Bath B-300 Base. For Heating Bath B-301 and B-305, 110 V | 11B300102 | |
| Heating Bath B-300 Base. For Heating Bath B-301 and B-305, 230 V | 11B300101 | |
| Holder. Clamp for glass assembly E | 048125 | |
| Holder, set, For fixing the Woulff bottle onto R-300 | 11065756 | |
| Content: Holder Woulff bottle and 2 M4x8 screws. | | ese. |
| Navigation knob. Ø30mm, green/grey, incl. knob case, cover | 11059157 | |
| For Rotavapor® R-300, Heating Bath B-300 Base, In- terface I-300/I-300 Pro and Recirculating Chiller F-305/ F-308/F-314. | | |
| Receiving vessel. For Woulff bottle, GL40, 125 mL, P+G | 047233 | |
| Rubber band. To fasten condenser on holder | 032013 | TE BE |
| Sieve. For water control valve (011606), Ø18mm | 011514 | |
| Shut-off valve. For distribution head of glass as- sembly S/CR/BY | 040626 | |
| For reflux reactions, for interruption of condensation. | | OF Str |
| Support foam sensor, Incl. clamping nut, support ring To fasten foam sensor on glass assembly | 11059024 | |
| | | OL SL |
| T-piece. Incl. cap nut (3Stk) GL14 | 038190 | |

| | Order no. | Image |
|--|-----------|------------|
| Tubing. PTFE, Ø3/4 mm, white, 600 mm | 028096 | |
| Use: Feeding. | | |
| Extraction thimbles, Set. 25 pcs, 43 x 118 mm, cellulose | 018106 | \bigcirc |
| For Soxhlet extraction unit. | | |

10.3 List of abbreviations

| Abbreviation | Meaning |
|--------------|---|
| ADR | Accord européen relatif au transport international des marchan- dises dangereuses par route (European Agreement concerning the International Carriage of Dangerous Goods by Road) |
| DKD | Deutscher Kalibrierdienst (German Calibration Service) |
| EPDM | Ethylene propylene diene monomer |
| FEP | Fluorinated ethylene propylene |
| FFKM | Perfluoro-elastomer |
| FPM | Fluorinated propylene monomer |
| GGVE | Gefahrgutverordnung Eisenbahn (German Hazardous Goods Reg- ulations for Railways) |
| GGVS | Gefahrgutverordnung Strasse (German Hazardous Goods Regula- tions for Road Transport) |
| NBR | Nitrile butadiene rubber |
| PBT | Polybutylene terephthalate |
| PETP | Polyethylene terephthalate |
| PTFE | Polytetrafluoroethylene |
| RID | Règlement concernant le transport international ferroviaire de marchandises dangereuses (Regulations concerning the Interna- tional Carriage of Dangerous Goods by Rail) |

10.4 Health and safety approval

To guarantee the health and safety of our staff and to comply with the law and the regulations for handling hazardous materials, for the purposes of health and safety at work and safe disposal of waste, no products may be sent back to BÜCHI Labortechnik AG or repaired unless we have received the declaration below, completed and signed.

Products sent to us will not be accepted for repair until we have received this declaration.

- Copy the form overleaf and complete it.
- Make sure that you know the full details of the substances with which the device has been in contact and that all questions have been answered fully and correctly.
- Send the completed form to us in advance by post or fax. The declaration must reach us before the device.
- Enclose a copy of the declaration with the device.

 If the product is contaminated, inform the carrier (in accordance with GGVE/GGVS/RID/ADR).

If the declaration is missing or the procedure described is not followed, the repairs will be delayed. We ask for your understanding and cooperation with regard to these measures.

10.5 Health and safety

Declaration regarding the safety, hazards and safe disposal of waste

To guarantee the health and safety of our staff and to comply with the law and the regulations for handling hazardous materials, regarding health and safety at work, and to comply with safety regulations, health and safety requirements and requirements for safe disposal of waste such as chemical waste, chemical residues or solvents, the form below must be fully completed and signed whenever devices or faulty components are to be sent back to our factory.

Products or components will not be accepted if this declaration has not been provided.

| Device | Model: | Part/Device no.: | |
|---|---|---|--|
| Declaration for non-hazardous ma- terials | We hereby assure that the products returned have not been used in the laboratory and are new. have not been in contact with toxic, corrosive, biologically active, explosive, radioactive or other hazardous materials. are not contaminated. The solvents or residues of the substances pumped have been removed. | | |
| Declaration for haz- ardous materials | In respect of the products returned, we hereby assure that all substances (toxic, corrosive, biologically active, explosive, radioactive or otherwise hazardous) that have been pumped by the products or have otherwise been in contact with the products are listed below. the products have been cleaned, decontaminated, sterilised inside and outside and all inlets and outlets are sealed. List of hazardous materials that have been in contact with the products: | | |
| | Chemical, material | Hazard category | |
| Final declaration | products and have ans | t with the substances that have been in contact with the swered all questions correctly. sures necessary to prevent potential hazards in respect of | |

Operation Manual Rotavapor® R-300

Name (block letters), position (block letters):

Signature:

10.6 Rotavapor® induction training

Introduction training Rotavapor®

Introduction Training Educating Rotavapor® Users

The following topics shall be trained as part of the "Introduction Training" after the installation:

- Reviewing fundamental principles of distillation under vacuum
- Explanation of the Rotavapor® working principle
- \Box Understanding the impact of the Δ 20 rule, pressure adjustment, condenser loading, rotation speed and flask size

2. Rotavapor® R-300

- Setting the heating bath temperature, condenser angle and rotation without the interface
- Locking the heating bath and chiller temperature
- Setting and deleting a depth stop
- Proper Combi-clip use (mounting and removing the evaporating flask, removing the vaporduct)
- Correctly starting and stopping the distillation process
- Adding solvents during distillation

3. Interface I-300 / I-300 Pro

- Setting the pressure, rotation, lift height and heating and cooling temperatures
- Implementing operating modes (i.e. Manual, Timer, Continuous, AutoDest, Drying and Methods)
- Utilizing the solvent library and favorites feature
- Remote monitoring using the Rotavapor[®] App
- Adjusting the hysteresis and maximum pump output

4. Safety features

- Reviewing prohibited uses and potential dangers as described in the operation manual
- Familiarization with P+G coating, protection and splash shield, safety stop in case of power failure, temperature limit setting, overpressure prevention, heating bath overheat protection

5. Maintenance and cleaning

- Cleaning the heating bath and the vacuum pump
- Cleaning the condenser, vapor duct, Woulff bottle, receiving and evaporating flask
- Preventive maintenance
- Using the leak test, finding and removing a leak

6. Convenient additional functions

- Automatic foam removal (foam sensor), automatic vacuum regulation/control (AutoDest)
- Additional safety add-ons (e.g. level sensor)
