# Multitalent for high demands

**Sigma is a leading international manufacturer of laboratory centrifuges for diverse sectors, including biotechnology, pharmaceutical, medical and environment analysis. Laboratories, institutions and companies everywhere in the world have been relying on premium Sigma quality – Made in Germany – for more than 40 years. The company stands for innovative products and development of durable, energy-efficient and especially user-friendly devices.**

The Sigma 3-18 product series is the perfect choice for all users who set stringent demands on refrigerated benchtop centrifuges and prefer a wide variety of operating options. Both the refrigerated version Sigma 3-18KS and the refrigerable and heatable version Sigma 3-18KHS enable RCF exceeding 30,000 x g and are very convenient to use thanks to the patented one-knob controller. Combined with the extensive portfolio of rotors and accessories, these universal centrifuges set standards for versatility and performance.

# Equal to every challenge

## Fast acceleration and short braking times

The Sigma 3-18KS and Sigma 3-18KHS centrifuges are designed for research tasks and routine procedures in laboratory operations. They are often used in hospitals, universities, industrial laboratories, and in the biotechnology and pharmaceutical sectors.

The refrigerated or actively heatable version Sigma 3-18KHS is popular amongst users for sedimentation of liquid media at relatively high temperatures, among other applications. Overall the Sigma 3-18KS and Sigma 3-18KHS offer many options that allow work processes in laboratory operations to be made more efficient, safer and more convenient. Thanks to their unique versatility and a broad range of fixed-angle and swing-out rotors, they also appeal to demanding users. With RCF above 30,000 x g for fixed-angle rotors and very short acceleration and braking times, they offer a perfect combination of performance and productivity.

They also score with well-conceived features: Intuitive one-knob Spincontrol S controller and effective operation with illuminated buttons for start, stop and lid opening. Cycle counting, rotor identification, lid opening assisted by gas springs, and easy, effortless lid closing simplify everyday laboratory work and provide maximum safety.

Microcontroller based, speed up to 18,000 rpm, suitability for low-speed operation, choice of ten languages, and a comprehensive portfolio of accessories are just a few of the reasons for choosing the Sigma 3-18KS and Sigma 3-18KHS centrifuges.

# Revolutionary simplicity

## g-lock® rotor exchange without tools or buttons

The innovative g-lock rotor system from Sigma enables rotor exchange with no need for any tools or button pushing. Mounting and exchanging rotors could hardly be easier. The rotor is locked in place by centrifugal force after the centrifuge starts running, eliminating the need for screw mounting.

The new g-lock system makes rotor exchange effortless and is ideally suited to application scenarios that require working with more than one rotor. It minimises non-productive time and saves time and money.

Along with simplified and efficient handling, the system features exceptionally high safety. Improper or incorrect use is also prevented by the rotor identification system.

Furthermore, the g-lock system enables easy cleaning of the stainless steel chamber to help minimise contamination risks.

g-lock

With the g-lock system, no tools or buttons at all are necessary for rotor exchange.

# Rotors and accessories

## Large selection and a multitude of applications

With an excellent balance of features and a large range of fixed-angle and swing-out rotors, the Sigma 3-18KS and Sigma 3-18KHS can be used for a wide variety of applications.

The extensive Sigma rotor portfolio also offers extremely high versatility. Particularly thanks to the high RCF capability with fixed-angle rotors, the centrifuges excel in high speed performance, resulting in a distinctly broader spectrum of applications compared to other centrifuge models of similar capacity.

As a special feature, Sigma can produce custom accessories upon request. The rotors and accessories are made from certified high-grade materials to withstand the most severe stresses.

The centrifuges can be supplied with the g-lock system or with the previous conventional rotor mounting system.

# Cleanroom

## Robust and resistant

An extremely resistant cleanroom coating is available from Sigma for all aluminium buckets and rotors. This coating provides reliable corrosion protection for accessories, especially where aggressive chemicals are used. The cleanroom coating can even withstand

exposure to sodium hydroxide and hydrochloric acid. The surfaces are also food-grade (FDA certified) and can easily be cleaned without residues.

# Material properties

## Guideline for optimal tube selection

Due to the many factors that influence material properties, this overview is only intended as a general recommendation. There is no guarantee of the stated properties. Users should therefore carefully

test materials for suitability under specific application conditions. Tubes should be discarded as soon as they show any sign of material fatigue.

# Spincontrol S controller

## Intuitive operation and many options

The patented one-knob Spincontrol S controller sets standards in control technology for laboratory centrifuges. All parameters, such as speed, RCF or temperature, are set using the multifunction knob and can even be altered during operation. Illuminated buttons for starting, stopping and lid opening facilitate access to these functions.

Along with manual parameter configuration, previously entered programs can be selected via shortcuts. These programs can be assigned alphanumeric names to enhance process reliability and simplify operation. Another practical feature is the progress bar that visualises program status and can be seen at a distance. All setpoint and actual values are constantly shown on the clearly organised display.

The countless features leave nothing to be desired: time after target speed reached, capacity for 60 programs, password protection to prevent unintentional alteration of operating parameters, and the rotor cycle counter are just a few of the highlights that make the Spincontrol S controller a highly versatile system that is ready to meet the laboratory requirements of the future.

This premium controller from Sigma supports internal quality management functions as well as external communication with a laboratory information management system (LIMS). That way the Spincontrol S supports traceable professional reporting.

# Centrifuge tables

Sigma centrifuge tables are available in six different sizes. Matched to the corresponding centrifuge dimensions, they combine convenient work height with an optimally calculated footprint. The tables are made from coated sheet steel and are equipped with a storage compartment (with two doors) and a convenient pull-out shelf. Lockable castors allow the centrifuge tables to be easily moved and positioned in the laboratory.
